Introduction – ᲙᲚᲛᲞᲟᲠ

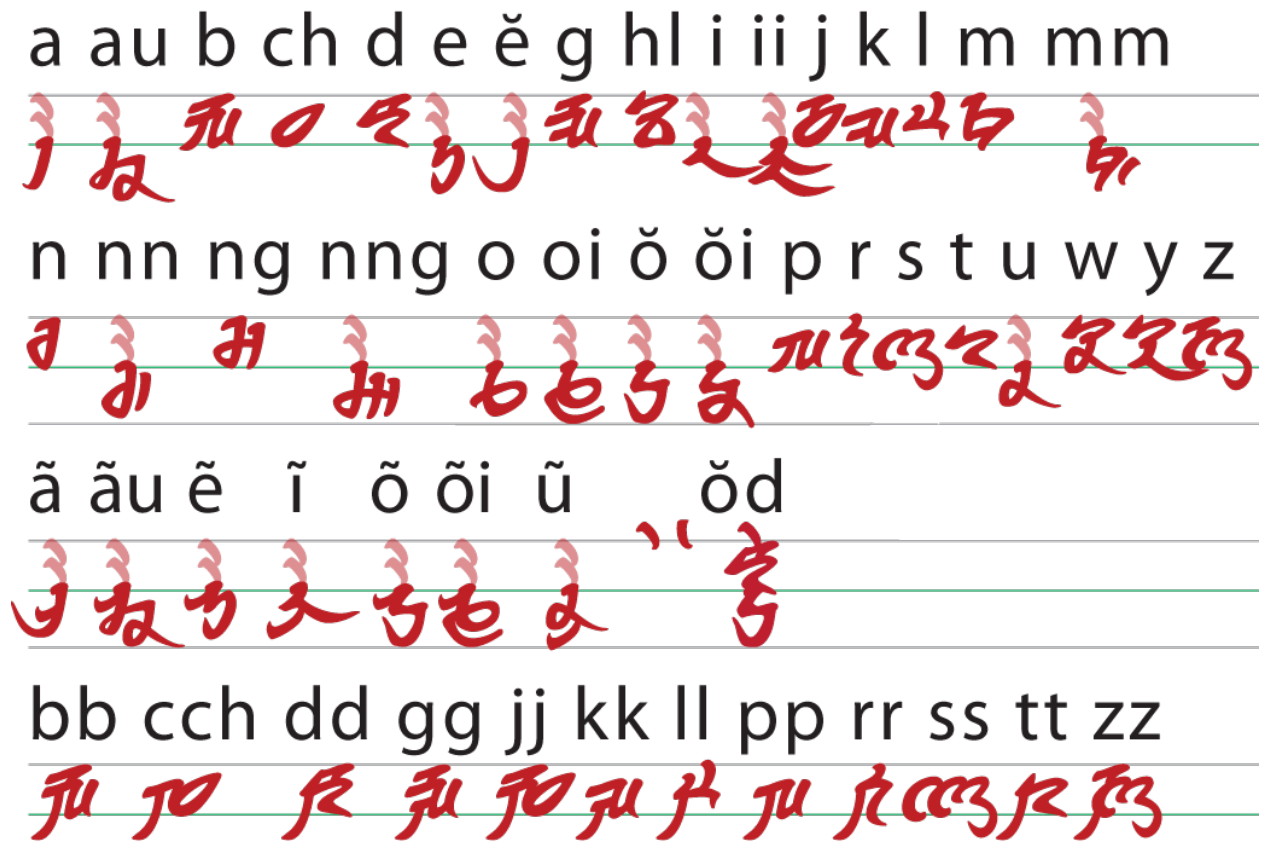

The primary reason that Siinyamda exists is as a function of production design and world-building for *Senn*, the 2014 indie sci-fi film (<http://sennition.com>). The fact that it is a functioning conlang and not just visual “decoration” is a byproduct of my (Watkins) interest in conlanguing both as a hobby and professionally. There was never any idea that the language would be spoken extensively on camera, but everyone involved felt that it should play an important role in the audience’s experience of the film.

Departure Points – Ęmda

As the director, Josh Feldman had to approve the look of the language in every context that it would appear on screen. The initial designs were all based on its look and not the way it might sound. Josh wanted it to have an “original” feel in the sense that it should not look like any readily identifiable script. The majority of viewers should not consistently say, “looks like Arabic” or “looks like Hindi,” etc. The character names Senn and Kana were decided early on, as were the planet name Pyom and the disease name Dranitic Fever. This told me that the orthographic system should support consonant clusters and doubled nasals at the ends of words, but there was little other guidance and essentially no restrictions from Josh. However, we knew that there would be a great deal of the the writing on screen, so it had to be something practical. At this stage the working name of the language was Ęmda, “speech.” I began prototyping with a Japanese brush-pen.

After much scribbling, Josh approved these proto-letters as a feasible launchpad for a more detailed dive into the design. I moved directly into rendering the glyphs as vector based artwork in Adobe Illustrator. This gave me maximum flexibility to easily play with the forms and assigning them to phonemes.

Even “fresh out of the pipe” the mapping of the phonology to the orthography was largely complete and final. If you learn to read the language, 95% of this will be legible to you. The most significant changes between then and now are (1) doubled nasals are no longer considered “vocalic” so they are not subscripted as all vowels are. (2) The shapes of **k** (Ⓚ) and **g** (Ⓜ) changed. (3) The romanization of **ě** (/ə/) and **ö** (/ɔ/) changed to **é** and **ø** for the convenience of being able to type them on Apple’s iOS. (4) The general shape of **ø** shifted as did the way it would be written in handwriting. (5) The letter **sh** (Ⓢ) did not exist yet in this state of the language. It was added when Josh named Senn’s best friend Resh. (7) The idea for the special compound for the first person pronoun **ød** was deprecated and abandoned. (8) Highly “one off” and customized doubled consonants (with the exception of the nasals) were re-conceived as being produced with a special leading diacritic, reducing the total number of glyphs.

Writing Down Words

In the film Senn is reading a book. For the purpose of “keeping it real” we decided on a name for the book’s story and explored what that title might look in print. *The Tale of the Clever Yal* initially became **Uddõì Yal ngo Bìnna** in the language which was then named **Sinya ngo Amda** (Language of Writing) using primarily Japanese grammatical structures. We assembled the words using the glyphs you see here and ended up with the following:

遠天書型

Josh felt strongly that this looked too much like Chinese. This is not really surprising considering its origins out of a Japanese brush-pen. There are two or three shots in the film that features a scant few words in this script, but it was essentially just set aside. Josh wanted to do something that would feel “comfortable” yet still “odd” to audiences from all regions and cultures. It does inform Siinyamdan handwriting however. And, this was the foundation for the system of the writing, the phonology, and to some extent the birth of the grammar.

Familiar, Yet Foreign

The production design budget would not allow for Senn to live in exotic environments that no one had ever seen before. We felt that atmospherically everything should seem run down and un-cared-for for at least 60 to 70 years. So we set the timeframe for the props to 1930’s~40’s US. That then sent me looking for typeface styles that might meet that need. We never conceived of this language as having only one typeface. That is not how the real world works. Compare these three words (“university” *mahaawithayaalai*) in Thai:

มหาวิทยาลัย มหาวิทยาลัย มหาวิทยาลัย

If you do not read Thai, at first glance they may not even look like the same language to you, but this is the kind of variation that you are accustomed to seeing in the Roman alphabet on a daily basis. This is the level of realism we strived for typographically. So, the launchpad for the next iteration of the written language was a real, slightly “old fashion” typeface.

abcdefghijklmnopqrstvwxyz
ABCDEFGHIJKLMONOPQRSTU
VWXYZ 12345678910

so back. During the process of working on the typefaces, I also was refining the vocabulary and grammar, and the placeholder word for “tale, story” which had been **bìnna** became **bad**, and it still is that word today—especially since it’s in the finished film. The nasalized adjectival ending on **uddōi** *clever* has become a relic of an accent from a former age. It’s an old book.

Does it still look like Chinese? Maybe. A little. But not if you know how to read Chinese, and particularly if you’re a native reader of the language. All of these letterforms undeniably come from the Roman alphabet. The pieces and parts are simply arranged in a way that makes them look distinctly *not* Roman. I love ligatures (in the typography and calligraphy of all scripts), so when I have the bandwidth to make them in Siinyamda, I do, and that likely makes it all come across as a bit more like something from Asia.

Guts and Bolts

With this level of confidence in how the language was working I set off to accomplish the next two milestones. (A) Make fonts for other typefaces/styles that would be very useful for creating artwork in a highly productive fashion and (B) flesh out the grammar and lexicon so that I could also very productively translate any word, phrase, or text that was needed for prop-making. We knew that we would print posters and use writing on wardrobe, household items, etc. There was a *lot* to do.

The language did not need to be highly conceptual or out there, so I just fell back on dumping all of the grammars and cultural contexts that are already familiar to me into something that my brain would not need to struggle with excessively. I also found in the art direction process that it was easier to have lots of “little” (meaning “short”) words to work with in many cases. In others it was handy to have some that were a bit longer. Words in the shape of CVC(2)V were particularly nice for my sensibilities. So riffing off of Esperanto and Cherokee, I decided to create an extensive list of VC(2)(C,C) roots that could be inflected to become nouns or verbs or adjectives or adverbs. I also imagined the language being a mashup of something polysynthetic that was spoken natively by a population (Senn’s ancestors) that was occupied by a completely foreign culture/power who brought in a language that was highly analytic (the corporation). This gave me the flexibility with lexicon-building that I needed to meet the *visual* purpose that the writing would play on the production. And, this led to my simply calling the language Siinyamda, (**s.iiny.amd.a** [person].write.speak.[noun]), “One’s speaking/communicating writing-ly.” NB: Polysynthetic words often don’t “English” well.

The phonology is largely European. French meets Italian meets Portuguese with a touch of Thai thrown in, but no tones. (Josh: “No tones!”). The grammar (sentence structure) is *very* much like Japanese. I speak it fluently, so if I ever have any question about some complex structure I just say it to myself in Japanese and let that guide me in codifying how it might work in Siinyamda. The verbs borrow several ideas from Cherokee, which I’ve been studying (not enough) for well over a year. They don’t copy it directly, but they are inspired by ideas from it. Unlike Cherokee, which proudly generally eschews direct borrowings from other languages, Siinyamda borrowed like crazy from the language of the occupying power. In my fictional back story, over the course of many hundred of years, it’s all been churning around so that it works in a way that I can fit almost any segment of text with any needed meaning into a space of any aspect ratio. If a

derived native concept makes a word that is too long, then I just give it a one syllable solution from the other stock. This is essentially the Japanese relationship to Chinese, so I just accept that things like this exist in the real world and enjoy it. Thai has the opposite. Native words are very short. Words like *mahaawithayaalai* from a couple of pages ago that come from Pali/Sanskrit via Buddhism are often *very* long. And guess what? English is the same. Our native Teutonic stock terms tend to be quite short. Things borrowed from Latin via French are the opposite. Smart (one syllable). Intelligent (four). So, in Siinyamda I fervently embrace this phenomenon. Finally, I come from the Deep South in the United States. The language I was born into *loves* contractions in everyday speech. I'm not sure how to spell "I'on't know," but I can say it and understand it *fluently*.

Senn's world was once wealthy and prosperous, but not in his or even his great grand parents's lifetime. There is no literary or art scene of any description. Education and literacy exist only so that workers can know how to obey rules and follow detailed instructions. Spelling conventions are essentially irrelevant to them. I also embrace this context. Many of the artifacts seen in the film would have been created as much as 100 years prior to the events on screen, so they would have been designed by someone who was more educated and attuned to standards, but there is no reason to be "snooty" when making propaganda targeted at blue-collar laborers. Apostrophes abound in Siinyamda, signifying that some kind of non-analytic conjunction has occurred. I have lots of fun with that and if contractions are good enough for everyday Japanese,

shinakutewanaranai > **shinakya**
shiteshimatta > **shichatta**

they are also good enough for this conlang. Japanese, no apostrophes. Siinyamda, TONS. ເື່ອ ງ ງ ງ ງ **gem ttyang** > ເື່ອ ງ ງ ງ ງ **ge'ttyang** *today* (see it *in the wild* on the poster below); ເື່ອ ງ ງ ງ ງ ງ ງ ງ ງ **gem sho wé anté** *this is a tree* > ເື່ອ ງ ງ ງ ງ ງ ງ ງ ງ **gem sho w'anté** or even ເື່ອ ງ ງ ງ ງ ງ ງ ງ ງ **gem sho wa'nte**. This convention gives me maximum flexibility for copy-fitting and also jibes well with the fictional context of the film's story. Spelling, schmelling. Is's'all good!

A Never-ending Story

Senn is “in the can” as the industry is fond of saying and has enjoyed almost a year of viewings at film festivals and private screenings. It’s been both delightful and surprising that audience members who know nothing of conlanging still find the language and its use visually in the film intriguing and worthy of inquiry. I have lived with this language in my head (and heart) for over 18 months now and I have probably created as much new vocabulary and missing grammatical conventions during the collaboration on this document as I did for the film itself. The more I play around with it, the more it’s growing in size and growing on me. I’ll move now to more internal (fictional) context for why it is the way it is. I hope you will find the true history of *Senn*’s tongue as told within the framework of the the history of *Pyom* as enjoyable to read as I do to fabricate parts of it now, even long after the credits have rolled.

Internal History

Farewell Rora

Royddin corporate archives document in the Mizemmian year 43’097, that 9 individuals (five females and four males) varying in age from three to 56 planetary context years (y.pc) were collected from region 32’35 of candidate world 57’92’81 and transferred to Resource Evaluation Center 379’2. Records show that “the stock is deemed sufficiently intelligent, robust, and malleable to be retained and developed into a corporate asset.”

Records also show that those who had been collected for evaluation referred to their world as **Rlorla** (sic.). They were a socially complex people, but decidedly non-technological and had never knowingly encountered off-world cultures as such.

7 y.pc later the Planetary Asset Development Group of Royddin Resources came to an agreement for transfer of ownership with an entity known only through its broker as **ÿy** (sic.). The broker produced a deed to the planet that was deemed valid under Mizemmian Corporate Practices Law (Sec. 78’98778’25’3’9), or more accurately, under a loophole therein. And, for the sum of z397’09’7 the Planetary Asset now still know as *Pyom* (“jewel”) became the property of **Mizemm ngo Roiddinn (Mizemm ng. Royddin, or simply MngR)**. The ÿy signed the contract with

this mysterious mark and the name we spell today simply as “Rora” began to vanish swiftly into historic oblivion.

Seeing the Light

The natives never rebelled against their new corporate ownership, at least not in any great numbers. The acquisition brought with it technology to completely erase a person’s existence from the individual’s brain, but to simultaneously leave them physically healthy so that it was possible for the victim to be retrained into their humanity. Another loophole in corporate law deemed this process humane.

However, the “zombies” produced by this brainwashing procedure were so unable to care for themselves that they were not even capable of finding food or water and would dehydrate and starve to death unless they were painstakingly retrained out of their second infancy. This condition was a tremendous burden on their families and proved to be the perfect deterrent against open rebellion. Any emergent leader not firmly under corporate control was particularly likely to “see the light” (a reference to the bright emanations characteristic of the brainwashing equipment), and end up naked and drooling on someone’s doorstep a day later.

Ljeyo’wahmdo

The precise pronunciation of the name has been lost, but the natives of Rora called their polysynthetic language Ljeyo’wahmdo (“we speak it among ourselves”). Attempts were made briefly around R270—equating to 270 years after the Royddinese acquisition—to reconstruct it completely, but to little avail. Too many generations had passed and the original Roran way of life had been completely obliterated by that time. Fragments, like the philosophy of **llyun & srad**, were maintained secretly in song and poems that were passed down orally to younger generations, but speakers always denied any knowledge of the old ways or preferences for them for fear of having their minds wiped away.

The Royddin corporation brought with the acquisition and occupation their highly analytic language Royddinese, a mutually intelligible dialect of its parent company's Mizemmian Standard. Corporate policy forbade the general teaching of Royddinese to all of the newly conscripted workforce, but as the dense and opaque structure of the Roran dialects was impenetrable for the new ownership, the Office of Sociopsychological Resource Optimization (OSRO) devised a creole strategy for the 2nd~5th generations that proved tolerably practical and enforceable as new generations were bred into the labor force.

By R130 two very distinct languages, both with a great deal of vocabulary from Mizemmian Standard, were being spoken in everyday life on Pyom. Royddinese proper was artificially constrained to adhere to its origins and history. The 7th Mizemmian Dynasty had endured for well over 30,000 y.pc in its current organizational paradigm and this required strict policing of linguistic conventions within the corporate hierarchy. Certain drift was inevitable due to the great distances of space, but Pyom's location meant that at least every 7 to 9 years managers received instruction on how to modulate their pronunciation, reporting style and vocabulary to remain compliant and in good standing with regional and central headquarters.

A select few native Rorans who were promoted into the corporate management class learned Royddinese for privacy and reporting requirements, but if they ever taught it to non-management individuals without authorization, all involved were summarily exposed to the light. Linguistic leakage was therefore extremely rare with the exception of technology-related nouns and some abstract concepts for which it was more convenient for the corporation to just teach the working class the words or versions of the words that they already used commonly in Royddinese. And so it went for the first 383 years of Rora reborn as Pyom.

The Yosetlo Experiment

In R384 the linguists of the OSRO received authorization and funding to experimentally manipulate the common language of the indigenous workforce. This was done over the course of more than 75 years to accomplish three primary goals:

- Study/analysis and documentation of the language in its form at the time and its natural evolution over the course of the study period in terms of semantic drift, emergence of slang, etc.
- Standardization/simplification of the language in order to make it more approachable for new managers and overseers originating from off world.
- Experimentation in the role of language as an influencer of productivity and employee complacency.

The first researchers who were actually native speakers of Royddinese named this project in the language of their affection, **Yosetlo**, "Our private tinkering."

By R450 the Yosetlo project had trained approximately 2,000,000 individuals over three generations in the language they eventually named **Sishletlamda** ("Reformed Universal Speech"). This number represented roughly 40% of the population of the entire planet. The most noteworthy features of this semi-engineered tongue were a clarification and normalization of several

phonemes and a highly artificial simplification and standardization of the heart of the language, its roots. For example the R397-era disyllabic root **ahsi** *be active; take action* which belonged to the now extinct Class 2 Apophonic Paradigm (**d.ohsh.a., en.essh.e hrl.ahss.a, k.ahss.a, y.ohsh.o...**) was formalized and simplified to the new and very regular root **asy** (**d.asy.a, n.asy.a, hl.asy.a, y.asy.a**). During the process, control groups from populations who had been “converted” to Sishletlamda and those who still spoke the essentially unmodified tongue were tested against each other. Records indicate there was likely a bias on the part of researchers to find their new creation superior for the corporate goals at hand. However, in the big picture of the history of the language that is today called **Padnamda** (“It is commonly spoken”), the Yosetlo experiment, at least from the perspective of its corporate-sponsored goals agenda, became irrelevant very quickly.

GPE I

In R452 based on massive corruption within the Office of Accounting and Facility Operations the first Great Pyomian Econopocalypse (GPE I) began with very little warning. By R453 over 575,000 individuals had been summarily laid off and ejected from corporate controlled campuses all over the planet. Impact on Pyom was most noticeable in the territories immediately surrounding Royddin’s HQ and Central Manufacturing. The management who caused the calamity were publicly executed for treachery, but corporate law did not allow for the mass extermination of 100s of thousands of innocent employees who had merely become redundant. If the layoff had involved up to a few thousand they’d have all been brainwashed before “release” per standard operating procedure. But, even carrying out the synaptic purges would have been impossible based on the available staff and holding facilities—not to mention the cost of imprisonment during processing—so they were simply let go. Roughly 60% of those who left the corporation’s employ were speakers of Sishetlamda. The other 40% spoke the unmodified language of the late R300’s. The vast majority of both sub-segments died of starvation and warring over scarce resources. Royddin erected massive walls to protect their facilities and consumables, and aftershock layoffs related to GPE I continued for another 4.5 years. By R460 the **Seggrøn** (extramurosian territory outside the manufactory walls) population had stabilized at approximately 85,000 and another creole, **Pēbamda** (better known to us as Ditchling) was being born.

The people of the Ditches (the open sewers of poverty outside the Manufactory walls) found ways to live off of the combination of waste from the corporation and rudimentary agriculture that was still possible at that time. Total environmental devastation came in later centuries. The quality of their life was not good, but linguistically they were free.

The Reprieve

In R474 Royddin received the most unusual order in its entire Pyomian history. An agent approached the sales division with a request to purchase 7.73% of Pyom’s atmosphere and 2.81% of its water. There was an odd stipulation however that the resources would have to be “refurbished” to pre-acquisition standards, including the guarantee of “typical microscopic organism and mineral content for an average sample from the geographic regions specified” in multiple

sub-sections of the agreement. The fee offered was initially thought to have been a translation error. After it was verified, Royddin executives (**no'to yī mewū**—a polite translation would be “jumping through hoops backward”), found a way to accommodate the order. Everyone suspected the ÿ were behind it all, but as no signature was required—only payment—the customer(s) remain a mystery to this day. The event, known anecdotally as “The Reprieve,” while mercilessly challenging for Royddin biochemists, is not actually significant in the long view of corporate history except for the fact that the terms of the agreement necessitated a speed for which the corporation had no choice but to employ roughly 19,000 individuals from the Seggrøn, the Ditches—temporarily only, of course—for approximately 7.5 years. During this time work crews mixed and everyone’s language began to blend and change a bit further.

GPEs II & III and the 721

Beginning in R591 and R680 respectively, Pyom experienced two additional planet-wide economic catastrophes. The layoffs, mass expulsion of workers, and rehiring cycles that ensued ensured that Ditchling and Padnamda mixed with each other like pebbles tossed about together in a jar.

Near the beginning of GPE III in R682, the unthinkable (from the Royddin corporate intelligence perspective) happened. 723 executives who were fluent in Royddinese (allegedly over 600 of them having it hereditarily from their own parents as their native tongue) were detained and told they were being transferred off-world to other professional assignments. In reality, their salaries had been deprecated and they were scheduled for brainwashing. Through a clerical error, the brother of a deprecated sister learned of this planned action and he was in a position to sabotage the cerebral purges, but only by smuggling all of the deprecated into the Seggrøn—into the filth of the Ditches outside the towering walls. In the darkness of night they all changed into rags and began their escape. During the mayhem, two were killed, but 721 of them vanished into the Ditches and no further accounting of them has ever emerged in corporate records. The treacherous and heroic brother who instigated the escape was executed. It is supposed that up

to several hundred had secreted away enough wealth that they were able to flee Pyom entirely, but many remained and became integrated into the Royddin-loathing masses who wake and fall asleep every day and night to “the eternal stench” (Ditchling: **givyikha**). They have passed their linguistic gold down to their offspring. Though the vast amount of information that historically flowed through the corporation’s information systems is no longer there, the espionage economy on Pyom still thrives.

The GSE and Pyom Today

As much as Pyom suffered from GPEs I through III, it did not completely collapse. By R742 it had been so depleted of resources and fallen so low on internal forecasting projections that it was virtually unknown at Royddin headquarters, and even less so in the grand boardrooms of Mizemm. To seal the already rapidly declining backwater’s fate, on the last day of **Hnasàì**, the Miizemmmian “Festival of Assets” a frenemy corporation economically eviscerated System 92, including Pyom, by reallocating funds that had been slated for a loan promised to Royddin. It is rumored that the entire debacle was precipitated by a snide comment made to one heir by another over cocktails and thyrurian snail canapés at a private dinner party. The true cause will likely never be officially revealed.

Since the Great System-wide Econopocalypse (GSE), Pyom has become a **riwa** in Ditchling parlance, a barely extant “shade” on the verge of passing completely out of human awareness. Fewer than 190,000 people still eke out an existence on the forlorn world. More people in the Ditches speak Royddinese than in the corporate offices of the Manufactory. “**Tunnagem sed esté**” *the walls now wither* is the new status quo. The last linguist left Pyom over 60 years ago and the Padnamda dialect of the barely-have’s who still labor for a wage and the Ditchling of the utterly-have-not’s have mixed quite freely for decades. Welcome to Senn’s world.

Geminates – ጊጊ ጊጊ

Any consonant except **hl**, **w** or **y** may occur doubled, not only medially but initially. For the digraphs in the romanization gemination is indicated by repeating the first letter, **ssh** for [ʃ:]. In the native orthography non-nasal geminates are marked with the prefix ጊ, as in **dde** ጊደጊ *and*. The nasals have separate geminate forms, a following vertical dash: **nn** ጎጎ, **mm** ጠጠ, **nng** ጠጠ.

Word Shapes

Valid onsets include any vowel or diphthong, any single consonant or geminate, as well as:

- **b bb d dd g gg k kk m mm n nn nng p pp s ss sh ssh t tt z zz + r**
- **b bb ch cch d dd g gg hl j jj k kk l ll m mm n nn ng nng p pp s ss sh ssh t tt z zz + w**
- **b bb d dd g gg hl k kk l ll m mm n nn ng nng p pp r rr s ss t tt + y**
- **sl, sn, sp**

The valid intervocalic clusters are: **bbl bbr bby bd bg bhl bj bl bm bn bz chhl chk chl chm chn chng chp chr db ddl ddr ddw ddy dg dhl dl dm dn dz gb gd ggl ghl gl gm gn gz jb jd jg jhl jil jir jiy jl jm jn jng jr jy kch khl kkhl kkl kks kksh kky kl km kn kp ks ksh kt lb lch ld lg lhl lj lk llb llch lld llg llhl llj llk llm lln llng llp llr lls llsh llt llz lm ln lng lp lr ls lsh lt lz mb mch md mg mhl mj mk ml mmb mmch mmd mmg mmhl mmj mmk mml mmm mmng mmp mms mmsh mmt mmz mn mng mp mr ms msh mt mz nch nd ndr ngch ngd nghl ngj ngk ngl ngm ngp ngs ngsh ngt ngz nhl nj nl nn nn nnb nnch nnd nng nngb nngch nngd nngl nngj nngk nngl nngm nngp nngs nngsh nngt nngz nnhl nnj nnk nnl nnp nnr nns nnsh nnt nnz ns nsh nt nz pch phl pk pl pm pn png pp pphl ppl ps psh pt rb rch rd rg rhl rj rk rl rm rn rng rp rrb rrch rrd rrg rrhl rrj rrk rrl rrm rrr rrrng rrp rrs rrrsh rrt rrw rrz rs rsh rt rw rz shhl shk shl shl shm shn shng shp sht shy sk sl sm sn sng sp sr ss ssh sshhl sshk sshl sshl sshm sshn sshng sshp sshr ssht sshy ssk ssl ssm ssn ssng ssp sst ssw st t thl tk tl tm tn tng tp ts tsh tt hl ttl tts ttsh tty zb zd zg zhl zl zm zn zng zy zzhl zzl zzm zzn zzng zzy.**

Valid word-final codas are: any vowel or diphthong, **m mm n nn ng nng l (ll) r (rr) d j sh**. The **sh** is marginal, restricted to certain grammatical constructions and a few names.

The Elision Mark

The elision mark, which looks much like an apostrophe in the native orthography, marks three distinct phenomena in Siinyamda. In all but a few special cases, the mark is used when different words are merged into a single stress unit (effectively, one word), so the mark is written between the parts without spaces. It's ጊጊጊ **w'anté** not *ጊጊ ጊጊጊ ***w' anté**. The main exception to this is ጊጊ **yū' that** (conj.), and when the perfective **-ó** and attributive **o** merge in the nominalization construction **o yu** (p. 34).

While the elision mark may appear in the same position as the deleted element, it is just as likely for the elision mark to be placed in such a way that the writing is simplified. In particular,

Stress – ጠቅላይ ጥያቄ

In non-derived words, the accent is on the penultimate. Otherwise, the stress accent will go on the master root (see section XXX), unless:

- if the negative **-ir-** ገደብ is present, that takes the stress, except
- if the future **-én** ገደብ or perfective **-ó** ገደብ is present, that takes the accent, but
- if the exclamatory suffix **-yá** ገደብ (and various allophones), which is always verb final, occurs, that takes the stress

Morphophonology – ጠቅላይ ጥያቄ

The interrogative clitic **-nu** ገደብ causes regressive assimilation on nasals, **abem** + **=nu** gives **abennu**. The intensive verbal suffix **-yá** can also occur as **-á** and **-ayá**. The rules are,

- For the present, remove the **-é**. The other tense and aspect markers are not changed: **daré** > **daryá** *I know!*
- If the form ends in a vowel, add **-yá**: **onndiinwa** + **-yá** > **onndiinwayá**.
- If the resulting form ends in a single or geminate consonant other than **y** or **w**, add **-yá**.
- If the resulting form ends in **y**, whether alone or as the final element of a consonant cluster, add **-ayá**.
- If the resulting form ends in **w** whether alone or in a cluster, add **-á**.
- If the form ends in a consonant cluster with **l**, **hl**, **r**, or **z** as the final element, add **-á**.
- Otherwise (i.e., on all other clusters), add **-yá**.

The imperfective **-wa** and the prohibitive **-winn** have an epenthetic vowel **-a-** or **-é-** after certain clusters. If the stem ends in **w**, **y**, or a consonant cluster ending in **hl**, **l**, **r**, **w** or **y**, the epenthetic vowel is used. For example: **.ugr.** + **wa** > **ugréwa** or **ugrawa**, but **.ugg.** + **winn** > **uggwinn**.

In compounds, a final **i** or **ì** will be connected to a following root with **y** if it begins with a vowel, **krĩ** + **ũnnng** > **krĩyũnnng**. The diphthong **oi** becomes **oy** before a vowel, **shoi** + **e** > **shoye**. The diphthong **au** becomes **aw** before a vowel, **rau** + **-oi** > **rawoi**.

In compounds, final stops are very likely to assimilate completely to the initial consonant of the second element, as in **zød** + **benn** > **zøbbenn**, **zød** + **tal** > **zøttal**, **zød** + **gyé** > **zøggyé**.

Similarly, final **l** will assimilate completely, as well, **ngwol** + **gyé** > **ngwoggyé**, **ngwol** + **bbol** > **ngwobbol**.

After a nasal vowel, word-initial **g** turns into the velar nasal **ng**, as in **chyũ** + **gyé** > **chyũngyé** *shirt*.

The short demonstratives **gem**, **gon** and **gal** (p. 20) sometimes lose their final consonant, which can cause gemination in the initial consonant of the following word (if that consonant is not part of a cluster),

gem zìn > ge'zzìn
gal zawsã > ga'zzawsã
gal bemm > ga'bbemm

If the initial consonant is **g** or **gg** it may become the velar nasal,

gem ggii > ge'nngii
gon ggyo > go'nngyo

“Philo-Proclivity” - နှုတ်စကား

The consonants **p**, **b**, **t** and **d** have a particular likelihood to form consonant clusters with **r** and **w**. Since **d** is a valid word-final consonant, sometimes words ending in **d** combine with particles following them if those begin with **r** or **w**. For example, *from a sickness* is usually written **ddid're** rather than **ddid re**, and is stressed as a single word.

If such a combination would result in an unnatural stress pattern (primarily penultimate), it is less likely to occur. So,

Kyod're is very likely
Jobód're is very likely
Llyunrad're is less likely (but not impossible)

The elision of final **-a** or **-é** is also a cause of this, **dwad wè anté** > **dwad'w'anté**, and the most likely cause for consonants other than **d**.

The Noun - ဗဟုဝဏ္ဏာ

Though there are vestiges of a more extensive gender system which are confined to certain story-telling contexts, in contemporary Siinyamda there is only the basic distinction between animate and inanimate nouns. Neither animate nor inanimate nouns are marked for number, though animates do have separate pronouns for singular and plural, which includes subject marking on the verb. So, apart from explicit use of quantifiers, the only signal that an animate noun is plural is agreement marking on verbs:

Roì hlerswa.
roì hl-ers-wa
man 3SG-sleep-IPFV
The man was sleeping.

Roì terswa.
roì t-ers-wa
man 3PL-sleep-IPFV
The men were sleeping.

Siinyamda has root, derived and phrasal nouns. Each type takes a different construction when possessed.

Root nouns, such as **kku** *room* and **roì** *man*, are not derived from other words, or at least no derivation is recoverable. Such nouns may be either native to Pyom or come from Mizemmanian.

There can be doublets, where a Mizemian word is more likely to be used by corporate management, with a native or derived word used by the workers, such as Mizemian **yud** *translation* and **suryamda** *translation* (< **.ury.** *convert*, **.amd.** *speak*).

The possessor of root nouns takes the relational particle **ngo** (English 's, Japanese *no*):

Ø'ngo kku
 Ød-ngo kku
 1SG-POSS room
my room

Resh ngo kku
 Resh ngo kku
 Resh POSS room
Resh's room

What most readers will recognize as nouns are very often constructed from verbs and verb phrases in Siinyamda. Determining the correct possessive construction for these must take into consideration both the structure of the nominalized verb or verb phrase, as well as the larger structure of the clause in which the “noun” is occurring.

In the simplest case, object nouns are created by prefixing the indefinite animate subject marker **s-** and adding the nominalizing suffix **-a**, as in **sara** *knowledge* from **.ar.** *to know*. With these, possession is usually marked by changing the subject prefix to match the possessor,

Dara
 d-ar-a
 1SG-know-NMNL
my knowledge

Noun possessors will be part of a nominalized phrase, with the verb agreeing,

Resh hlara
 Resh hl-ar-a
 Resh 3SG-know-NMNL
Resh's knowledge

Roì tara
 roì t-ar-a
 man 3PL-know-NMNL
(the) mens' knowledge

A phrase like **Resh ngo sara** is extremely marked, adding a clinical—or perhaps sarcastic—tone, distancing Resh from actual knowledge.

A few verb roots create object nouns without the indefinite animate prefix **s-**, such as **asya** *action*. These still take subject prefixes for possession, **Resh hlasya** *Resh's action(s)*.

The inanimate indefinite **z-** is used especially to form abstract nouns from stative verbs, such as **zìsma** *shadow* from **.ìsm.** *be dark*. These may take possession with **ngo**, but other constructions are possible. For example.

Pyom ngo zauta
 Pyom POSS economy
the economy of Pyomm

Pyom ye o zauta
 Pyom at ATTR economy
the economy of/on Pyom

Gal zawsã ngo zamda'sh søyolpé.
 that robot POSS speech-TOP one-understands-with-difficulty
It's hard to understand when that robot talks.

Nouns with **z-** can be rather idiomatic.

Finally entire verb phrases may be used as nouns, such as **jãul momja** *cancer*, (literally, “the body consuming itself”). For these, the noun element is frequently the target for possession, so that **patacha’delda** *terrible handwriting*, from **patacha adeldé** *ABCs are confused*, leads to **hlo ngo patacha’delda** *his monstrous handwriting*.

Other Noun Derivations

Agent nouns, as in *runner* from *run*, are created by prefixing **sõn-** to a verb with the **-a** nominalizing suffix, as in **sõnawa** *worker, laborer* from **.aw.** *work, labor*. If the verb stem begins in **o** or **õ**, the prefix **sõ-** replaces them, as in **sõmjã** *diner* (as in a restaurant) from **.omj.** *eat*. For some speakers, verb stems starting in **ø** would also have **sõ-** replacing the **ø**, as in **sõrrsa** *owner* from **.ørrs.** The resulting meaning may be idiomatic, **sõnichra** *a snake, a snitch*, from **.ichr.** *poisonous*.

Very rarely, and effectively confined to formal language, the indefinite animate **s-** combines with the passive to form nouns such as **spedwa** *one who is owned*, **spossha** *victim* (of an attack or accident).

Nouns for machines often end in **sã** *machine*. This suffix can reshape the root in unpredictable ways, as in **yu’ssã** *interface* from **yud** *translation*.

Diminutive

There are gendered diminutive suffixes, **-da** for masculine (**-ta** after names ending in **-sh**, **Reshta**, not ***Reshda**) and **-ley** (ⲡⲓ) for feminine (sometimes written **-lé** in the romanization). These are primarily used on names and other forms of address (**Loda** *dude*).

Originally **-da** was a non-gendered first person possessive suffix, as in **niyyiinda** *my precious little one*. This use persists in a few situations, and has even extended to **-ley**, so that in referring to their own brains (sense), a man would say **bãuda** but a woman would usually say **bãuley**, unless making a jest or mild insult to a man. Another example,

Ló, dēzìramdũ, pyøda iilsa ona mamm, zawsã ona uppyó.
ló d-ēz-ìr-amd-ũ pyø-da iils-a ona mamm zawsã ona uppy-ó
dude 1SG-lie-not-speak-ADV eye-1SG.POSS 2-NMNL self before robot self explode-PFV

I’m tellin’ ya, dude, the robot itself exploded in front of my very eyes.

Pejorative

The suffix **-cha** marks a noun with contempt or disapproval,

Ngãucha zen domjìrè.
ngãu-cha zen d-omj-ìr-é
hooch-PEJ ACC 1SG-consume-NEG-PRES

I don’t drink that shit.

Ge'drūcha nāunn!

gem drū-cha n-āunn
 this door-PEJ 2SG-open

Open this damn door!

See also the resignation idiom for a use with verbs (p. 35).

Demonstratives and Indefinites

The demonstratives fall with a correlative series:

	This, here	That, there	Yon, yonder
General	gem	gon	gal
	<i>this, here</i>	<i>that, there</i>	<i>yon, yonder</i>
Particular	gema	gona	gala
	<i>this</i>	<i>that</i>	<i>yon</i>
Place	ge'pinn	go'pinn	ga'pinn
	<i>this one</i>	<i>that one</i>	<i>yon one</i>
Point in Time	ge'nnra	go'nnra	ga'nnra
	<i>here</i>	<i>there</i>	<i>yonder</i>
Period of Time	gemyan	gonyan	galyan
	<i>this point in time</i>	<i>that point in time</i>	<i>yon point in time</i>
Day	ge'zra	go'zra	ga'zra
	<i>this period of time</i>	<i>that period of time</i>	<i>yon period of time</i>
Kind	ge'ttyang	go'ttyang	ga'ttyang
	<i>today</i>	<i>tomorrow</i>	<i>some day; long ago</i>
Reality	ge'sshwu	go'sshwu	ga'sshwu
	<i>this kind</i>	<i>that kind</i>	<i>yon kind</i>
Reality	tunggem	inngon	zanngal
	<i>this reality</i>	<i>that reality</i>	<i>yon reality</i>

The simple forms **gem**, **gon** and **gal** do duty as both locatives and simple demonstratives most of the time. The forms with adjective endings (**gemoi**, etc.), as well as the longer locatives (**ge'nnra**) are used mostly in more formal settings, or to resolve an ambiguity.

The **gema** forms are used more as independent pronouns, though the simple **gem** forms may also be used for that purpose when there is no ambiguity.

Gem gen'nu anté?

this what is

What is this?

Gema gen'nu w'anté?

this what PRED-is

What is this (thing)?

Gema roi rã o gã w'anté.

this man from ATTR thing PRED-is

This (thing) is the thing (we got) from the man.

The temporal adverbs refer either to the past or the future, according to context, except for **go'ttyang** which is only *tomorrow*. Without other context, **ga'ttyang** would be assumed to refer to the distant future.

Attributives

Most of what English speakers recognize as adjectives are in Siinyamda stative verbs. The ending **-oì** on such a verb creates an attributive form. Detailed discussion of **-oì** is with the verbs (p. 36).

In addition, nouns of material in **-e** may take **-oì**, which contracts into **-ey**, giving adjectives of material, as in **triing** *ceramics*, **triinge** *ceramic material*, **triingey ggyo** *tool made of ceramic*.

The Noun Phrase

The order of the noun phrase is:

Demonstrative/Determiner – Attributive – **noì** – Noun

Where the first slot may have either a demonstrative such as **gem** or words such as **dro** *some*, **chon** *a certain*, etc. Note the the attributive slot includes simple stative verbs acting as adjectives as well as larger attributive clauses acting like relative clauses. The position of **noì** *all, every, each* is fixed.

itoì no'jĩ
sufficient each-analysis
all sufficient analyses

dro aujoì jwa
some blue paper
some blue papers

gal no'jje
yon each-woman
each of those women

gal tunn ersoì no'roi

a certain idiotic man who is sleeping

gem eshmoì ddũ
this loud tongue
this loud tongue

gon aurroì jwa ngo epa
that green paper POSS totality
all those green papers

gem tunn ersoì roi
this now sleep man
this man who is sleeping

chon tunn ersoì roi
certain now sleep man
a certain man who is sleeping

The Pronoun – ၵၢၢၢၢၢ

Siinyamda pronouns are organized not along a singular-plural axis, but in a minimal-augmented pattern. This plays out in the second row below, the 1st + 2nd pronoun. In the minimal form this is a dual inclusive, “the two of us, you and me,” and in the augmented it is the 1st person inclusive plural, “you all and me.” For the other pronouns, minimal is singular and augmented is plural.

	Minimal	Augmented
1st	Ød, Ø'	yø , exclusive
1st + 2nd	nyě dual inclusive	lyě plural inclusive
2nd	Ĕ	lě
3rd animate	hlo ²	to
3rd inanimate	pinn	

The first and second person singulars are always capitalized, both in the romanization and in the native script. Both are also somewhat likely to be written contracted with certain particles. **Ø'ngo** for *my* is far more common than **Ød ngo**.

The inanimate third person pronoun does not distinguish number at all, and isn't much used except for tangible or easily named things. Generic uses of “it” will typically use some form of the noun **kya**, so that the question *who did it* will use **sõnu gon kya (zen) hlenoyá**, with **gon kya** where English speakers will want to use “it.”

The first person plural pronouns may be used in apposition with a noun to mean “X and I.” So, in answer to the “who did it” question above, one possible answer is **Pasro yø! Pasro and I!**

Intensive pronouns, “myself, herself,” etc., are formed with the word **ona actuality**. The combinations are not entirely regular,

	Minimal	Augmented
1st	Ø'dona	yø'na
1st + 2nd	nyõ'na	lyõ'na
2nd	Ĕ'nona	lõ'na
3rd animate	hlo'na	to'na

Sõrra hlo'na zen duló.

overseer himself ACC I-saw

I saw the overseer himself.

²In Senn's world, there are almost no animals to talk about, but **hlan** is still used in **Hlannu tanté?** *What are they?* while pointing at the family of deer. **Hlan** would also be used in slangy speech in place of **hlo** in the contexts of male familiar relationships, even with **hlanda**, *he* (that guy who is my good friend). **Hlanda yĩntyã'neriryá** *my guy don't talk no BS, now, alright?* It's often the pronoun used by males in vulgar speech about a male or female they are having casual sex with. **Usnottyang etũ, hla'zznn dakkó** *I fucked him/her three times yesterday.* It implies that the sex is hot and dirty. If you were challenging another male about his intention to have sex with your partner, you'd only use **hlo**, however. **Hlo'zznn nakkén yũ' napna'sh nepauhloyá** *you've gone apeshit crazy if you think you're gonna fuck her.* It would be disrespectful to refer to her as **hlan** in this context.

For the third person inanimate, the word **ona** is simply used,

Ló, dēzìramdũ, pyøda iilsa ona mamm, zawsã ona uppyó.
Dude I-not-lying-ly eye both self before, robot self exploded
I'm tellin' ya, dude, the robot itself exploded in front of my very eyes.

Indefinites

Siinyamda relies on nouns and pronouns with the article **dro** *some* and **dyèn** *any* for indefinites (“someone, anyone”).

Dro hlo zen duló.
some 3SG ACC I-saw
I saw someone.

Dro hlan zen duló.
some being ACC I-saw
I saw something.

Ø'pren dro hlan hlelnobó.
to-me some being woke-up
Something woke me up.

Dyè'ngã zen tanya nuló?
some-thing ACC Q you-saw
Did you see anything?

Dro gã zen duló.
some thing ACC I-saw
I saw something.

Ø'pren dro gã elnobó.
to-me some thing woke-up
Something woke me up.

Gem dro nra anté.
here some place it-is
It's here somewhere.

Note the use of **dyèn** with the indefinite animate pronoun **sõ** *one*,

Ron dyèn sõ samdau, dujauhlén.
if any one one-speaks I-will-go-crazy
If anyone talks, I'll go crazy.

Indefinites are not used when a particular item is in mind,

(Aloi) gã zen nìpyau.
(one) thing ACC choose
Take something. (From a known collection.)

But,

Dro gã zen nellau.
some thing ACC take
Take something.

Dyèn is used for free choice,

Dyé'ngã zen nìpyau.
dyèn gã zen n-ìpy-au
any thing ACC 2SG-choose-POT
Take anything.

Dyèng'ya yũ' nujmamdau.
dyèn kya yũ' n-ujm-amd-au
any matter QUOT 2SG-prefer-say-POT
Say anything you want.

And with negation,

Dyé'ngã zen dulìró.
any-thing ACC I-didn't-see
I didn't see anything or I saw nothing.

Relational Particles

Siinyamda has a large collection of relational particles, which follow the noun or pronoun they go with. They have a wide range of functions, some marking core elements of a clause, such as **zen** for direct objects, and many others filling in for English prepositions.

Below we discuss a few of the most important particles, as well as a few that deserve special attention due to their use or meaning. Discussion of the many remaining particles is saved for the dictionary.

Core Arguments: “Zen, Pren, Wé”

The direct object marker, **zen**, was grammaticalized from a root meaning something like “focus on, tackle a problem.” So **zen** has a slight implication of intentionality, though that is very weak these days. For most contemporary speakers **zen** simply marks any direct object without reference to intention, but older speakers might resort to other particles for a clearly non-intentional act. For example,

Dro san zen Trann hlennlũ hlimnìzzró
some chemical ACC Trann he.breathed he.soon.died
Trann breathed in some chemical and died shortly thereafter.

An older speaker might immediately ask whether Trann had committed suicide. If he had not, they would prefer this:

Dro san pren Trann hlennlũ hlimnìzzró
some chemical DAT Trann he.breathed he.soon.died
Trann breathed in some chemical and died shortly thereafter.

Some of these expressions have since become fixed phrases, such as **pren .egg.** *bump into*, while **zen .egg.** is simply *hit*.

Unlike datives in many languages, the particle **pren** is not used in a benefactive sense. Siinyamda has a separate particle for that, **prã** *for, on behalf of*. Both **pren** and **prã** are ultimately derived from a verb meaning “give.”

Ĕ prã hlo pren datén
 2SG for 3SG to I.will.tell
I will tell him for you.

Prã is also used with nominalized phrases for purpose clauses, *in order to* (p. 41).

The particle **wé** marks the noun predicate of the copula (**.ant.**) and similar verbs. It readily elides to just **w'** before vowels. It is often omitted when the context is clear,

Tonro sōga wé hlanté
 Tonro spy PRED s/he-is
Tonro is a spy.

Tonro sōga hlanté.
 Tonro spy s/he-is
Tonro is a spy.

It may also be seen with the verbs **.itt.** *become*, **.at.** *seem to be*, **.etr.** *transform into*, and **.ibby.** *continue, persist, remain*.

Possession and Attribution: “Ngo” and “O”

The particle **ngo** is used for possession in all the senses familiar to speakers of English: ownership, whole-part relationship (my arm), kinship, attribute (my temper), orientation or location (the front of the building) and association (my teacher).

Yud Ngo Kkenng
 translation POSS office
Bureau of Translation

iiwasã ngo ttyud
 nudge-rod POSS end
tip of the nudge-rod

Ø'ngo ngẽ
 1SG-POSS mother
my mother

sìppra ngo pwed
 management POSS vehicle
management('s) vehicles

However, keep in mind that **ngo** is only appropriate most of the time for root nouns, and that derived nouns often show possession differently (p. 17).

The pre-Mizemian stages of the language used the particle **o**, **wo** after **-au**, (spelled **ᵛ au** and **ᵛ wau**) for all of these functions of **ngo**, but remains now only to allow phrases to be used as the attributes of nouns.

Bãu pobbra rũ o sora'sh dopìryá.
 bãu p-obbr-a rũ o s-or-a-shé d-op-ìr-è-yá
 brain PASS-clean-NMNL as ATTR 3INDEF-live-NMNL-TOP 1SG-want-NEG-PRES-EMPH
I certainly have no interest in living as a zombie.

Ĕ la o mauta
 2SG like ATTR sell.out
a sell-out like you

Gal abbasã mamm o zawsã ìwòsré.

that loader in.front.of ATTR robot ain't.right

There's something funky going on with that robot in front of the loader.

In non-Ditchling varieties of the language, **ngo** is starting to intrude into noun attribute functions, such as the start of a preference for **V.a ngo** to **V.oì** (p. 36), as in,

Ggii zen hliida ngo roì zen dulé

ggii zen hl-iid-a ngo roì zen d-ul-é
book ACC 3SG-read-NMNL POSS man ACC 1SG-see-PRES

I see a man reading a book.

for the more expected **ggii zen tunn hliidoì roì zen dulé**.

In Ditchling the difference in meaning between **ngo** and **o** has so collapsed that they are treated as allophones, **ngo** after a vowel (especially after **o**) and **o** after a consonant, **ga pwet o ìrwu** *the dust on that vehicle*, **ø ngo tō ngo ìrwu** *the dust on my hand*.

Topic: “Shé”

The topical relational **shé** almost always takes the form **èsh** or simply **'sh**. The topic relational identifies the matter about which the rest of the statement somehow pertains.

Něza'sh dadaugré.

1SG TOP arm hurt-PRES

My arm hurts.

The Verb – ረገጠጥ

The Siinyamda verb can be quite complex, with both adverbial roots as well as control verbs all part of the verb, along with the expected person and TAM (tense, aspect and mood) marking. Here is the full template.

(REF) agent - ADV1 - ADV2/NEG - V - V.GOV (× 3) - NEG - TAM - EMPH

The “REF” slot is filled by a referent, a requirement certain verbs have to complete their meaning. The “agent” slot holds person marking, as well as some voice markers. There are two slots for adverbial roots, which may also be negated. The main verb comes next, followed by up to three governing verbs, which are for verbs of mood (“want”), aspect (“begin, stop”), and so forth. Next comes verb negation, then tense, aspect and mood (TAM). Finally, an intensive marker optionally comes last. The simplest verb will only fill two or three template slots, but it is not uncommon to see verbs with four to six slots filled.

We will now cover each slot of this template in order, except for the referent which we save for last.

Agent Marking

The agent slot has prefixes marking the subject of the verb.

	Minimal	Augmented
1st	d-	y- (exclusive)
1st + 2nd	ny- (dual inclusive)	ly- (plural inclusive)
2nd	n-	l-
3rd animate	hl-	t-
3rd inanimate	(none)	

Like the independent pronouns (p. 22), the agent markers are aligned in minimal-augmented system, and the third person inanimate doesn't distinguish number.

If a first person plural pronoun is used with an overt noun subject, it means “Subject and I,”

Etu hładarryũ,

Etu hl-ad-arry-ũ

Etu 3SG-true-be.beautiful-ADV

Pasro yeblé.

Pasro y-ebł-é

Pasro 1PL.EX-agree-PRES

*Pasro and I agree that Etu is really pretty.***Resh lyãdén.**

Resh ly-ãd-én

Resh 1PL.INCL-remain-FUT

Resh and us will be staying, Resh will be staying with us.

In addition to the person marking, the agent slot may be filled with one of five other prefixes.

- p-** passive
- m-** reflexive
- s-** indefinite animate
- z-** abstract inanimate, wholistic
- w-** ordinal (used only on numbers)

Passive and Reflexive

When the passive or reflexive are used, the verb doesn't take person marking.

Ød møsshó

Ød m-øssh-ó

1SG REFL-hurt-PFV

*I hurt myself.***Ød pøsshó**

Ød m-øssh-ó

1SG REFL-hurt-PFV

I was hurt.

The reflexive is also used for an intransitive sense of **.er.** verbs, which are otherwise transitive,

Kiimm teré.

kiimm t-er-é

alarm 3PL-DO-PRES

*They sound the alarm.***Kiimm meré.**

kiimm m-er-é

alarm REFL-DO-PRES

*The alarm sounds.***Indefinite Subjects**

The indefinite animate subject may be used in general statements,

Gal zawsã ngo zamda'sh

gal zawsã ngo z-amd-a shé

that robot POSS 3INDEF-speak-NMNL TOP

søyolpé.

s-øy-olp-é

3INDEF-difficult-understand-PRES

*It's hard to understand when that robot talks.***Dulhlamda re Ø'sh sadnolpìrè.**

1SG-odd-speak-NMNL because 1SG TOP 3INDEF-normal-understand-NEG-PRES

Because I speak with an accent it is common for people to misunderstand me.

The inanimate indefinite **z-** is practically confined to the creation of nouns (p. 18), but is occasionally used in a totalizing sense, emphasizing the broadness or complexity of circumstances around an event,

Zepa ubbré.

zepa ubbr-è
universe mysterious-PRES

The universe is mysterious.

Zepa zubbré.

zepa z-ubbr-è
universe 3INAN.INDEF-mysterious-PRES

The universe is infinitely mysterious.

Dapa zadongwa.

d-ap-a z-ad-ong-wa
1SG-grow.up-NMNL 3INAN.INDEF-true-terrible-IPFV

Every facet of my childhood was abysmal.

Ordinals

Prefixing **w-** to a numbers creates ordinals,

Wiilsoì yaumm dwuj drèl esshya ìssyó.

w-iils-oì yaumm dwuj drèl esshy-a ìssy-ó
ORD-two-ATTR sun stable behind settle-NMNL being-PFV

The second sun began to set behind the stable.

In the native orthography the prefix is simply written attached to the digits, **ᵂᵂ wiilsoì.**

Adverbials

The verb roots in the adverbial slot cover a large range of functions, some highly idiomatic. When verb roots have adverbial meanings that are not necessarily immediately obvious, they have a separate definition for their adverbial use in the lexicon. For example, the root **.ad. be true** means *very* when used adverbially:

Hladagyé

hl-ad-agy-è
3SG-be.true-be.rude-PRES

He's very rude.

Stative verbs themselves may also take adverbial roots,

Ìweshé

ìw-esh-è
be.wishy.washy-be.red-PRES

It's reddish.

Idiomatic combinations such as

Onndiinyá

onnd-iin-é-yá
be.large/fat-be.good-PRES-EMPH

It's awesome!

are defined in the dictionary under the main root.

Some compound stems may also slot into adverbial position,

Yìr! yū' hlosyobesó.

yìr yū' hl-osy-ob-es-ó
no QUOT 3SG-be.afraid-cause-smirk-PFV

"No!" he responded with a sinister grin.

Adverbial roots can be negated with the standard negator **.ìr.** following them,

Talìreyè.

t-al-ìr-ey-é
3PL-be.single-NEG-be.together-PRES

They are not unified (they are together, but not in a singular fashion).

Note that the roots **.ep. complete(ly)** and **.ad. tru(ly)** are irregularly negated when used adverbially, **.ìr.ep. not completely** and **.ìr.ad. not truly**.

Describing Motion

Following Talmy's terminology, Siinyamda is modestly a V-language. That is, the path of motion is encoded in the main verb, and the manner of motion is expressed some other way. In English, we say "John ran into the house," but in a V-language you have to say something more like "he entered the house runningly." In Siinyamda, the core verb will be a path verb (**.ìj. enter**, **.uw. go back, return**, etc.) with manner encoded as an adverbial (**.anl. run**, **.emb. follow**, etc.).

Kõihlan ggãu iid hlauyuwó.

kõi-hlan ggãu iid hl-auy-uw-ó
air-creature facility to 3SG-float-return-PFV

The flying critter floated back to the facility.

Jjēdra sho zen hlaungiló.

jjēdra sho zen hl-aung-ìl-ó

The Jjēdra walked up the tree.

Zìn renn taungulló.

zìn renn t-aung-ull-ó
party from 3PL-walk-depart-PFV

They walked from the party.

Senn hlanluwó.

Senn hl-anl-uw-ó
Senn 3SG-run-return-PFV

Senn ran back.

Aspect Adverbials

Several roots used in adverbial position interact with verb aspect. With the future, **.ìmn. be soon** means "about to."

Hlìmnawũrén.

hl-ìmn-aw-ũr-én
3SG-be.soon-work-collapse-FUT

She's on the verge of work-collapse.

With the future, **.ìnnng.** *be close* also means “about to,” but it can also mark the recent past,

Ìnnganngrén.

ìnnng-anngr-én
be.close-end-FUT

It's about to end.

Ìnnganngró.

ìnnng-anngr-ó
be.close-end-PFV

It just ended.

The root **.al.** *be one* with the perfective marks an experiential, to have had the experience of doing the action of the main verb,

Mra ngo zanngal zen tanya nalosló?

mra ngo zanngal zen tanya n-al-osl-ó
wealth POS distant.reality ACC Q 2SG-be.one-imagine-PFV

Have you ever imagined being rich?

Sswemm zen dalomjiró.

sswemm zen d-al-omj-ir-ó
insect ACC 1SG-be.one-consume-NEG-PFV

I have never eaten bugs, I haven't eaten bugs

Main Verb

Siinyamda verbs can have very labile transitivity, with the presence or absence of a direct object the only sign of verb's transitivity. For example, **.uly.** may mean either *like* or *please, be pleasing* depending on how the participants are marked:

Roì zen dulyé

man ACC I.like

I like men.

Roì pren dulyé

man DAT I.am.pleasing

Men like me, I am pleasing to them.

Also possible for this verb is:

Ø'pren roì tulyé.

Ød-pren roì t-uly-é
1SG-DAT man 3PL-please-PRES

I like men.

On the other hand, the verb **.ujm.** *prefer* will always be used with **zen.** The possibilities of any given verb will be given in the dictionary where necessary.

In these, the **-o** typically takes the main stress accent, falling as it does in penultimate position. However, when the emphatic **-yá** is used, the secondary stress occurs on the main verb stem rather than the **-o**, as in **nòidauzo'wauyá** *just hang in there!*

Tense and Aspect – 𐌲𐌹𐌶𐌰𐌸 𐌸𐌹𐌶𐌰𐌸 𐌸𐌹𐌶𐌰𐌸

There are six markers of tense, aspect and mood.

- **-wa** the past imperfect (**ubrãwa ngo wa**)
- **-ó** the perfective (**manngroba ngo ó**)
- **-é** the present persistent (**tunnagem ubra ngo é**)
- **-én** the future (**ttyiil issyira ngo én**)
- **-au** the potential (**zwě edda ngo au**) (in Ditchling, **-ā**)
- **-winn** the prohibitive (in Ditchling, **-irā**)

The past imperfect marks ongoing events in the past, the perfective marks singular acts:

Senn sōga wè hlantwa yū' onū tanya hlamdó?
 Senn sōn-og-a wè hl-ant-wa yū' on-ū tanya hl-amd-ó
 Senn AGT-spy-NMNL PRED 3SG-be-IPFV QUOT be.real-ADV Q 3SG-say-PFV
He actually said that Senn used to be a spy?

The present persistent is used for things that are generally true,

Resh rrinn Senn hlayelwé
 Resh rrinn Senn hl-ay-elw-é
 Resh than Senn 3SG-be.more-be.tall-PRES
Senn is taller than Resh.

A present progressive is marked by the adverb **tunn** now immediately before the verb,

Tunn domjibbyopé.
 tunn d-omj-ibby-op-é
 now 1SG-consume-continue-want-PRES
I want to keep eating.

Hlo zen tunn darré.
 hlo zen tunn d-arr-é
 3SG ACC now 1SG-cut.off-PRES
I'm not talking to him/her.

The future is straightforward,

Pwed tū renn unén.
 pwed tū renn un-én
 vehicle horizon from come-FUT
The craft will come from the horizon.

Ĕ pulén.
 Ĕ p-ul-én
 2SG PASS-see-FUT
You will be seen.

But also see its use in conditions (p. 42).

The potential has a number of functions. The adverb **zwě** expects the potential for present tense statements,

Zwě noyau.

zwě n-oy-au
 may 2SG-be.correct-POT

You may be right.

But it is also used in conditions (p. 42) and in commands (p. 38).

Finally, see the section on commands for use of the prohibitive **-wìnn**, p. 38.

Nominalization – བྱེད་ཀྱི་རྒྱུ་

A verb phrase is nominalized by suffixing **-a** to the verb instead of a tense or aspect marker. It is an extremely common and productive process in Siinyamda, not only in forming nouns (p. 17), but in working phrases into complex sentences. For example,

Hlütìnya

hl-üt-ìny-a

3SG-be.bad-stop-NMNL ACC

You cannot make him stop being bad.

zen dobeddiré.

zen d-ob-edd-ìr-é

1SG-cause-be.able-NEG-PRES

Here the phrase **hlütìnyé** *he stops being bad* is turned into a noun to make it the object of “you cannot cause...” This sort of structure pervades the language.

Because the nominalization suffix removes any trace of tense or aspect, the clause final construction **o yu** is available when precision is required.

Pyom zen nullén o yu zen depiigghlayá.

Pyom zen n-ull-én o yu zen d-ep-iigghl-é-yá

Pyom ACC 2SG-leave-FUT ATTR NMNL ACC 1SG-complete-forbid-PRES-EMPH

I absolutely forbid you to leave Pyom.

In the perfective, the attributive **o** contracts with the final **-ó** and is written **-o’ yu**.

Nìnngamdo’ yu Ø’zen adøsshýá.

n-ìnn-gamd-ó-o yu Ød-zen ad-øssh-é-yá

2SG-just-say-PFV-ATTR NMNL 1SG-ACC true-would-PRES-EMPH

What you just said really hurts me.

Internally Headed Relative Clauses

A rare usage for nominalized clauses is as relativizers, with some noun within the nominalized phrase acting as the head of the relative clause. For example,

Roì daulla

roì d-aull-a

man 1SG-love-NMNL

hlerswa.

hl-ers-wa

3SG-sleep-IPFV

The man (whom) I love was sleeping.

Eyád zìn hlerìbba'sh noìta adìndraté.
 Eyád zìn hl-er-ìbb-a-shé noìta ad-ìndr-at-é
 Eyád party 3SG-do-intend-NMNL-TOP everything true-be.in.order-appear-PRES
Seems like all's good to go for the hang-out Eyád is planning.

This sentence could also be worded as follows, using the more usual attributive in **-oì** for relativization,

Eyád hlerìbboì zìn'èsh noìta'dìndraté.
 Eyád hl-er-ìbb-oì zìn ...
 Eyád 3SG-do-intend-ATTR party ...

This construction is most common with **.er.** expressions, given a tendency to regard the order of **zìn .er.** as fairly fixed. To modern speakers, using the construction with other verbs seems old-fashioned.

Independent Clause Nominalization

A nominalized clause may be used as the sole verb of a clause. By using this form, the speaker is telling the listener that he is reporting information he believes or knows to be true. This most likely to be seen for statements about the future, and with the governing verb **.ølm.** *be required*,

Tudøngó, nn w3'5nr ang teyuwølma.
 t-ud-øng-ó nn weto ngo unyo' nrõ ang t-ey-uw-ølm-a
 3PL-separate-go.out-PFV but 3rd POSS 5 nrõ at 3PL-together-return-must-NMNL
They went out separately, but they're both due back together at 3'5.

Or answering the question **zwĩ ggii rii'mmu** *what color is the book (we're looking for)*, **ashølma** *it's supposed to be red.*

This construction originally had **anté** or some similar form of **.ant.** *to be* as the main verb.

Resignation

A nominalized phrase may take the suffix **-chá** (related to the pejorative, p. 19), which conveys the sense of “not a damn thing can be done about it,” in an atmosphere of quiet reservation, as in **hlerrdachá** *he's pretty damn predictable*. If tense is needed the form **o yuchá** is used.

Sssa, tunén o yuchá.
 ssa t-un-én o yuchá
 well 3PL-come-FUT ATTR NMNL.PEJ
Well, they're coming and there's not a damn thing we can do about it.

It can also be attached to a noun that's the final element in a clause.

Tunn ùna'sh Ø'ngo lwacha.
 tunn ùn-a shé Ø-ngo lwa-cha
 now be.a.problem-NMNL TOP 1SG-POSS stomach-PEJ
The problem is my damn stomach.

Action Nominal – ḥ'ḥ ḥḥ ḥḥ ḥ'ḥ

The action nominal, **-an**, creates nouns that name the action, as in

Sodwa	zen sanlan	atré
s-odw-a	zen s-anl-an	atr-é
3INDEF-be.healthy-NMNL ACC	3INDEF-run-ANMNL	help.PRES
<i>Running is good for one's health.</i>		

In Ditchling this form is used as a present progressive, as in **Senn nṛḷawa ga huwan** *Senn is returning to the manufactory now* (**h-uw-an** 3SG-return-ANMNL).

Adverbial – ḥḥ ḥḥ ḥḥ ḥḥ

In the simplest case, the **-ũ** adverbial suffix turns a stative verb into a simple adverb,

Nn onũ	tiilseyedwawa,	onwey?
nn on-ũ	t-iils-ey-edw-wa	onwey
but true-ADV 3PL-two-together-possess-IPFV		right?
<i>But they were actually a couple, right?</i>		

Øssnũ	yélwa.
øssn-ũ	y-él-wa
be.limited-ADV 1PL.EXCL-live-IPFV	
<i>We've lived such limited lives.</i>	

More often the adverbial is used with a full clause which comes before the main clause. It can set up a temporal context, or the background information, for the following clause,

Kiimm merũ,	serrdiiché.
kiimm m-er-ũ	s-errd-iich-é
alarm REFL-do-ADV 3INDEF-naturally-line.up-PRES	
<i>The alarm sounds, and everyone lines up.</i>	

Dro san	zen Trann hlennlũ	hlìmnìzzró.
dro san	zen Trann hl-enl-ũ	hl-ìmn-ìzzr-ó
some chemical ACC Trann	3SG-breathe-ADV	3SG-soon-die-PFV
<i>Trann breathed in some chemical and (then) soon died.</i>		

See also the section on temporal clauses (p. 40).

Attributive – ḥ'ḥḥ ḥḥ ḥḥ

The attributive ending **-oi** serves a number of functions, all of which attribute a verbal expression to a noun. In the simplest case, stative verbs turn into what are effectively adjectives,

dro aujoì jwa
 dro auj-oì jwa
 some be.blue-ATTR paper
some blue paper(s)

Note that these will not generally take agreement marking, so that one says **aushoì roì** *a meek man* rather than **hlaushoì roì**. However, older speakers are somewhat likely to use subject marking for plural nouns, **tonnoì chyẽ** *four dogs*, where a younger speaker would be content with **onnoì chyẽ**. Anyone not trying to sound old-fashioned will come off as snooty if marking singular agreement, **hlaushoì roì**.

The attributive is also used to form the equivalent of relative clauses,

Ggii zen tunn hliidoì roì zen dulé.
 ggii zen tunn hl-iid-oì roì zen d-ul-é
 book ACC now 3SG-read-ATTR man ACC 1SG-see-PRES

I see the man (who is) reading a book.

Taulloì ngẽ hlizzró.
 t-aull-oì ngẽ hl-ìzzr-ó
 3PL-love-ATTR mother 3SG-die-PFV

The mother whom they love(d) died.

To zen hlaulloì ngẽ hlizzró.
 to zen hl-aull-oì ngẽ hl-ìzzr-ó
 3PL ACC 3SG-love-ATTR mother 3SG-die-PFV

The mother who loves/loved them died.

Referent Verbs

Some verbs require a noun or pronoun in the immediately pre-verbal slot to complete their meaning. These include such things as **.amy.** *be friends with* and **.ẽjy.** *give birth to*. The adverbial element **.ey.** *together, with each other*, however, removes that requirement, **teyamyé** *they are friends (with each other)*.

Note that the referent is so tightly bound to the verb that the question marker **tanya** comes in front of the referent,

Epoì ggii zen tanya yud nereddau?
 ep-oì ggii zen tanya yud n-er-edd-au
 be.complete-ADJ book ACC Q translation 2SG-DO-be.able-POT

Could you translate an entire book?

Clauses – ཀྱི་ཁྱེད་ཀྱི་ལྟོ་སྐབས་ལྟོ་སྐབས་

The basic word order of Siinyamda is verb-final. The order SOV (subject - object - verb) is not uncommon, but OSV can be found, too. The relational particles make the roles clear.

Ditchling, on the other hand, is SOV.

Questions

Yes-no questions are formed with the particle **tanya** either at the beginning of the sentence or immediately before the verb. The final **a** may elide, as in **tany'anté**.

Tanya gem sho wé anté?

Q this tree PRED is

Is this a tree?

Gem sho wé tany'anté?

this tree PRED Q is

Is this a tree?

With questions that have a verb marked with the potential, **-au**, the particle may be **tanyo** (spelled ***tanyau** in the native orthography, 𐌲𐌳𐌹),

Tanyo Ě prā onyoì Padnamda zen doggrau?

Q 2SG for proper Padnamda ACC I.may.teach

Shall I teach your proper Padnamda?

Use of **tanyo** is slightly more polite with questions in **-au**.

Siinyamda content questions are often in-situ, that is, the question word is not moved to the head of the clause as it would be in English,

Gem gen'nu w'antýá?

gem gen'nu wé ant-è-yá
this what PRED be-PRES-EMPH

What is all this?

Ga'lló sōnu hlanté?

gal lō sōnu hl-ant-é
that dude who 3SG-be-PRES

Who is that dude?

Indirect questions simply put the question into the normal report clause structure (p. 41),

Gammu tunén? yũ' dazré.

gammu t-un-én yũ' d-azr-è
how.many 3PL-come-FUT QUOT 1SG-wonder-PRES

I wonder how many of them will come.

Commands

Giving command can be given in a broad range of expressions all the way from a few roots without final inflections to requests with **.aujj.ach.** *humbly request*.

Nen! Len! Do it!

Nyen! Lyen! Let's do it!

These are not necessarily rude, but would be if the context is not one of command or camaraderie. These contain an implicit **-yá**. If the commander is frustrated then these can go to **Nenachá! Liidachá! Lolachá! Miirachá!**, etc. "Do it, dammit!" (see p. 19 on the pejorative).

Standard commands use the potential **-au** and can take **-yá** if the sense is urgent.

Pan nerau. *Do so.*

Pan nerrsherauyá! *Do so! Make it a priority to do so!*

Daujjachũ, pan nerìrau. *I implore you, don't do that.*

Pan nerìrau yũ' tunn daujjachyá. *I'm begging you to not do that.*

Urgency can be expressed either with the adverbial **.innng.**, or with a command form ending in an unstressed **-o**.

Gem nobbro. *Clean this place up (now)!*

Ge'drũcha nìnngåunn! *Open this damn door right NOW!*

The **-o** form is not very common.

Siinyamda has a special negative imperative form, the prohibitive, **-wìnn**,

Nullwìnn!

n-ull-wìnn
2SG-leave-PROH

Don't leave!

Niibbrawìnn yũ' hlo pren dojwó.

n-iibbr-wìnn yũ' hlo pren d-ojw-ó
2SG-go-PROH QUOT 3SG to 1SG-order-PFV

I told him not to go.

Coordination and Disjunction

Noun phrases, pronouns and full clauses may all be joined with **dde** *and*, **Kana dde Senn mad-aulle** *Kana and Senn love each other a lot*. Alternates are introduced with **ba** *or*, **mrang ba ngìng serølmé** *it should be recycled or thrown away*.

To pick up after a pause, both **dde** and **ba** may be nasalized, and are prosodically separated from the reset of the clause,

Ddũd dondrè. Ddẽ, Ê nu'sh? *My name's Ddũd. What about you?*

With the first person pronoun, **Ød**, and other words ending in **d**, **dde** may occasionally cliticize, **Ø'dde Kana** *me and Kana*, or **ba'dde** (< **bad dde**) **ga'llyunsrad** *the story and that philosophy*.

In addition to **dde**, animate agents may be joined with the relational particle **ttau** *with*. Answering the question **sõnu go'ngya hlenoyá?** *who did it?*, **Pasro Ø'ttau** implies that I helped Pasro, while **Ø'dde Pasro** implies that Pasro was simply along for the ride.

Disjunction is handled with **èn** *but*, more commonly found as **nn**,

Ø'dona sõga wè depantìryá,

Ød-ona sõga wè d-ep-ant-ìr-è-yá
1SG-self spy PRED 1SG-complete-be-NEG-PRES-EMPH

nn dro to zen zwẽ donsau.

nn dro to zen zwẽ d-ons-au
but some 3PL ACC perhaps 1SG-know-POT

I myself am absolutely not a spy, but I may know some.

Temporal Clauses

Basic temporal clauses (“when, while”) can be handled in several ways. First, with the simple adverbial form **-ũ**, which covers quite a range of adverbial senses.

Dro san pren Trann hlennlũ hlìmnìzzró.
dro san pren Trann hl-ennl-ũ hl-ìmn-ìzzr-ó
some chemical DAT Trann 3SG-breathe-ADV 3SG-soon-die-PFV
Trann breathed in some chemical and (then) soon died.

The nominalization **o yun** has a range of senses, including reason, but is used temporally when the clause is a non-present continuative,

Geng’ya’sh zwě neblén o yun, depiijulyén.
gem-kya-ěsh zwě n-ebł-én o yun d-ep-ij-uly-én
this-thing-TOP perhaps 2SG-accept-FUT o yun 1SG-completely-happy-like-FUT
If/when you accept this idea, I’ll be over the moon.

Pan yũ’ yamdwa o yun, yø potnwa.
pan yũ’ y-amd-wa o yun yø p-otn-wa
thus QUOT 1PL.EXCL-say-IPFV ATTR time 1PL.EXCL PASS-punish-IPFV
They punished us if/when we said that.

In the example above **o yun** could just as well be replaced with **o yan**, which gives a more strictly temporal sense. See also:

Pan yũ’ o yan, yø zen totné.
thus QUOT o yan, 1PL.ACC they-punish
They punish us when we say that.

Finally, a nominalized phrase in **-a** with a durative sense can take the relational particle **yeng** while,

Pong øsma yeng noihlan’ěsh ìboi hlwãu iishrè.
pong øsm-a yeng noihlan-ěsh ìb-oi hlwãu iishr-é
hose clogged-NMNL while everyone-TOP free.ADJ time.off be-brief.PRES
While the hose is clogged everybody gets a short break.

Examples in use can be seen in the “Story of the Clever Yal,” p. 43.

Reason Clauses

“Because” is marked with the relational particle **re** with a nominalized clause,

Dulhlamda re Ø’sh sadnolpìrè.
d-ulhl-amd-a re Ød-ěsh s-adn-olp-ìr-é
1SG-strange-speak-NMNL because-of 1SG-TOP 3INDEF-common-understand-not-PRES
Because I speak with an accent it is common for people to misunderstand me.

Jjamm lyadiinewa re ttyiil lyoré.
 jjamm ly-ad-iin-ew-a re ttyiil ly-or-é
 rules 1PL.INCL-true-good-kiss-NMNL because-of still 1PL.INCL-live-PRES

We're still alive due to our finesse in romancing the rules.

Additionally, **jõ** may be used after a sentence is complete to introduce a new sentence with additional information,

Dadanngyá. Jõ, Broi yũ' o jjã'tó' yu jan Ø'pren
 d-ad-anng-é-yá jõ Broi yũ' o jjã ató o yu jan Ød-pren
 1SG-true-angry-PRES-EMPH because Broi QUOT ATTR topic seem ATTR NMNL about 1SG-to

nězó.

n-ěz-ó
 2SG-lie-PFV

I'm pissed. Because, you lied to me about what Broi supposedly said.

Purpose Clauses

Clauses of purpose are created with the relational particle **prã** with a nominalized clause,

Yélibbya prã gem sswemm zen yomjølmenyá.
 y-él-ibby-a prã gem sswemm zen y-omj-ølm-en-yá
 1PL.EX-live-continue-NMNL for this bug ACC 1PL.EX-eat-must-FUT-EMPH

We will have to eat these bugs in order for us to survive!

Report Clauses

Verbs of speaking and cognition use the conjunction **yũ'** at the end of the reported clause,

Gammu tunén? yũ' dazré.
 how-many they-will-come QUOT I-wonder

I wonder how many will come.

Niibrawìnn yũ' hlo pren dojwó.
 Don't-go! QUOT 3SG to I-ordered

I told him not to go.

Conditional Clauses

Siinyamda conditions are introduced with **ron**, and the consequent is optionally introduced with **rang**. General conditions overlap with simple temporal clauses. All of the sentences below are acceptable versions of *they punish us if we say that*,

Pan yũ' o yan, yø zen totné.
Pan yũ' o yan, yø potné.
Ron pan yũ', (rang) yø zen totné.
Ron pan yũ', yø potna adauwé.

And in the past, *they punished us if we said that,*

Pan yǔ' (yamdwa) o yun/yan, yø potnwa.

Future conditions have the future in both the condition and the consequent, *they will punish you if you say that,*

Ron pan yǔ' zwě namdén, (rang) Ę potnén.

Note the use of the adverb **zwě** *may, might* in the condition. The potential can also be used in the condition instead of the future,

Ron dyén sō samdau, dujauhlén.

ron dyén sō s-amd-au d-uj-auhl-én

if any one 3INDEF-speak-POT 1SG-certain-go.crazy-FUT

If anyone talks, I'll go crazy.

The potential is used in potential conditions,

Gon pan nìngamdó' yu zen ron toló, rang (Ę) potnau.

gon pan n-ìng-amd-ó o yu zen ron t-ol-ó rang (Ę) p-otn-au

that thus 2SG-just-say-PFV ATTR NMNL ACC if 3PL-hear-PFV then (2SG) PASS-punish-POT

They would punish you if they heard what you just said.

The contrafactual has a more formal periphrastic form, and the more common form which has the conjunction **ron** moving into the clause to immediately before the verb.

Ron gon pan nìngamdwa o yu zen toló o y'wantau, rang

ron gon pan n-ìng-amd-wa o yu zen t-ol-ó o yu ant-au rang

if that thus 2SG-just-say-IPFV ATTR NMNL ACC 3PL-hear-PFV ATTR NMNL be-POT then

pujotnó' y'w'anté.

p-uj-otn-ó o yu ant-é

PASS-certain-punish-PFV ATTR NMNL be-pres

The would have punished you if they had heard what you said.

And the more common,

Gon pan nìngamdwa o yu zen ron toló, rang (Ę) pujotnó.

gon pan n-ìng-amd-wa o yu zen ron t-ol-ó rang (Ę) p-uj-otn-ó

that thus 2PL-just-say-IPFV ATTR NMNL ACC if 3PL-hear-PFV then (2SG) PASS-certain-punish-PFV

The would have punished you if they had heard what you said.

(3) The procedure for moving them into the transport vehicles would happen virtually automatically. (4) They could be tricked by the drug into being obsessed by a smell, like hounds, so that any remaining sense of self defense and preservation could be deftly nullified. (5) They'd simply follow the olfactory beacon around the bend and up the ramp into the crowded chamber and even as the gates were slammed on their hindquarters they'd be essentially in a state of bliss.

The Twins Ruyún and Sarát at the Stream

Though it is by no means in the original, pre-acquisition language, this wisdom tale preserves a number of archaic features and will “sound old” to contemporary speakers. First, there is an (imperfect) avoidance of words from Mizemmian. Second, the direct object relational **zen** is never used. Third, **ngo** is replaced by **o** in all contexts. Fourth, the animate, lower-sentient marker **r-** (plural **tr-**) is used in conjugations and nominalizations. Fifth, locative relationals are only used to clarify details, and are often omitted.

the twin countered.

We now enter a section in a poetic form used for parables, **øwila** *escalation*. After a section of everyday prose there is an inflection point at which a rhyming scheme **ussa** is established. In this work it begins on (u1) **Bii dupodla yā yũ’**, which is then followed by the “lowing line” (**ommla**), which levels the tone back down to prose (temporarily). The number of rhyming lines builds to a sustained tempo and then there is an abrupt ending (**ausrendra**) This is a u1, u2, u3x3 **øwila**—the most classic form.

I will sharpen my stick."

.ajy. v. hold (still) in the hands or arms; embrace; cradle (a baby).

.agy. 1. v. be rude; **hladagyé** he's very rude; **sōrra zen sagyó' sō'sh Ø'wé dantirè** it's not me that was rude to the boss! 2. v. break, cheat on rules, with **zen** or **mar**; **jamm zen/mar hlagyé** she breaks the rules.

.akk. 1. v. fuck, a vulgar term for having sex (see **.ũy.**). 2. v.adv. *fucking*, a vulgar intensive with something of the same tone as English "fucking"-infixing. It is not, however, ever used in cursing someone (for which see **.ucch.**); **dakkarirau** how the fuck should I know?

.akl. v. be pressureized; have pressure.

al part. inside; **kōi al lwu auyawa** dust was floating in the air; **Ø'ngo so al adlè** my arm aches.

.al. 1. v. be one; be single; 1. 2. v.adv. once; with the perfective, has the experiential sense of ever, **mra ngo zanngal zen tanya nalosló** have you ever imagined being rich? **sswemm zen dalomjiro** I have not ever eaten bugs.

.āl. v. be precise; specific.

.ald. v. fare; get along; **zo'nnaldé?** how are you? **zo'nnaldwa?** how have you been getting along? **ta'nnodwé** are you well?

.āll. v. kiss (lips).

.ally. v. rain.

.aln. v. remember.

.alr. v. be sweet.

.alt. 1. v. rock (back and forth); undulate. 2. of liquid, make/have waves.

.alw. v. be lucky, be fortunate.

.am. 1. v. pierce, penetrate. 2. v. pass through, **Yanoppsā ngo sed chī yauyamó** we floated through the walls of the Polychronom.

.amd. v. speak; **Senn sōga wé hlantwa yū' onū tanya hlamdó** he actually said that Senn used to be a spy? **ló, dēziramdū, pyōda iilsa ona mamm, za-**

wsā ona uppyó I'm tellin' ya, dude, the robot itself exploded before my very eyes.

a. samda n. speech (in general).

b. sibbamda n. speech, given by a presenter.

c. siinyamda n. orthography, writing.

d. sōnamda n. speaker.

e. suryamda n. translation (see **yud**).

f. zamda n. speech, specifically, producing sounds; **gal zawsā ngo zamda'sh sōyolpè** it's hard to understand when that robot talks.

amdol n. letter (of the Patacha).

.amm. v. be yellow.

.amr. v. release; let go; surrender; **depamrirū, zonnu nemlo' yu zen dubrurá** "I will oppose your decision 'til my dying day!"

.amy. v.ref. be friends with; **Yunn Ø'pren Chomma o ló hlanya zen hlozó** Yunn introduced me to this dude Chomma that he's friends with.

.an. v. be logical; follow reason; make practical sense; **tany'ané?** make sense?

.ān. v. be hot.

a. .iiy.ān. v. be warm.

.ānd. v.ref. resemble, **Senn Lann hlāndirè** Senn does not resemble Lann.

.āny. v. be ironic;

a. zānya n. irony, in the Pyomian, cynical sense.

ang part. in, at (temporal); **Sìppra 1'5 ang tunén yū' Praled Ø'pren hlinngoggró** Praled just informed me that Management is coming at 1'5.

.angr. v. symbolize; represent; **palamda papna ngo angra wé anté** a word is a symbol of a thought.

.āngy. v. be sick; be ill.

a. sāngya n. illness, in a person or population.

sānāngya n. fever, occurring live in a human(oid) body.

a. zāngya n, illness; for inanimates, deformity.

.anl. v. run; hurry; **iilsoi chyē yø iid tanlunó** two hounds ran out at us; **sodwa zen sanlan atré** running is good for one's health.

ann n. female waist and hips.

.anng. v. be angry; be upset.

.anngr. v. end; **soranngra cchã w'anté** the end of life is death.

anngyé n. skirt.

.anny. v. be docile.

.anr. v. be tired; fatigued.

.ant. 1. v. be, exist; **Say ddyod wé hlanté** Sy is an animal. 2. idiom, have, with possessor in topical, **Ø'sh ggii anté** I have a book; but see, **ga'jjé dôrrsa wé hlanté** that cow is mine.

.any. v. appreciate; be thankful; be grateful.

.ap. v. age; be an age; grow up; grow old; **dapa zadongwa** every facet of my childhood was abysmal.

.apn. v. think, be of the opinion, with **yũ'** for reported thought, **gema zwĩ bbran wé antén yũ' dapné** I think this is the night.

.apr. v. know; understand (through shared experience or empathy).

.apw. v. be high, be up high.

.ar. v. know (common knowledge); thoroughly; intimately; with confidence.

a. **parũ** adv. of course, "as is known;" **Ttiinng parũ, jjamm al hlennlé** Ttiinng is a notorious suck-up.

.arj. v. be from; come from; originate from; **nranu narjé?** where are you from?

a. **pamda'rja** n. etymology.

.arn. v. be old.

.arr. 1. v. be private; exclusive; **kku arré** (this) room is private, a "do not enter" sign. 2. v. shut down communication, cut someone off, stop talking to someone, **hlo zen tunn darré** I've cut her off, I'm not talking to her; **yø meparró** we broke up (likely for good).

.ãrr. v. take a bath; bathe; shower.

.arrb. v. watch.

.arrm. v. equate to; equal.

.arry. v. be beautiful; handsome; comely.

.ary. 1. v. be other; be another; **A: Tanya Radá zwĩ sōga zwě hlantau? B: Pan auwìré. Hlaryé yũ' desné** A: Could Radá be the spy? B: Likely not. I believe it's someone else; **gem bbaun aryé** this is another genre. 2. v.adv. otherwise, differently, **naryollau** try again (try a different answer, as when guessing). **Dulyau. Tanya llyã daryonnreddé?** Please. Could I select again? **aryá!** another one (when asking for a different selection).

.as. v. play; have fun.

.ãs. v. have an epiphany; see the light; **tii nãsolpó** you finally got it!

.ash. v. be red; **iradashé** it's not so red; **zwĩ riimm asha dde dwad'w'anté** the colors (we were discussing) are red and brown.

.asht. v. be safe.

.asl. v. promise.

.assh. v. bring; deliver.

.assw. v. riot; protest.

.ast. v. send (out); transmit; **dro keng iwũ zwĩ zelojja Yanoppsã rã tunn pasté** the phenomenon is being transmitted somehow or other from the Polychronom.

.asy. v. act; take action.

asya n. action.

.at. 1. v. seem like; appear to be; may take predicate complement with **wé**; **gal sho la até** that looks like a tree. 2. v.gov. to seem to; **gem ijjikkató** this seems to have putrified; **nadawusnatyá** you look really exhausted.

.atl. v. message; communicate; convey; tell.

.atr. v. help; assist; **sodwa zen sanlan atré** running is good for one's health.

.aty. v. expect.

.auch. 1. v. be unfair, feel unfair. 2. with **zen**, cheat, trick.

.aucch. v. be electrified; produce electricity.

a. zauccha n. electricity.

.aud. v. nurse; suck (of a baby).

.ãud. v. complain; bitch about X.

.audr. v. need; be in need of; **sozdan, lyadaudrá** we all need forgiving; **dro sshwu ãuyaja zen lyaudré** we need a miracle; **ge'jjã prã iimmhloì iirpwed paudré** we've gotta get a powerful tug in here for this.

.augr. v. be sad; feel sad; **něza'sh dadaugré** your deception really saddens me; **něza Ø'zen dadaugrobé** your lying really brings me down.

.auj. v. be blue.

.aujj. v. be humble; be meager; **Daujjachũ, pan nerìrau** I implore you, don't do that.

.aull. v. love; **taulloì ngě hlizzró** the mother whom they love(d) died; **Kana dde Senn madaullé** Kana and Senn love each other a lot.

a. aulla n. love.

b. meyiilsaulla n. a couple in love.

.auhl. v. lose one's mind, go insane, become paranoid, be not right in the head; **ron dyén sō samdau, du-jauhlén** if anyone talks, I'll go crazy.

.aum. v. be wrong; be in violation.

.aump. v. promise.

.aумы. v. glow, give off light; shine.

a. zaумыa n. light source.

.aunl. v. forget; **Chomma hlujaunlén o yu jan hlowayá** he's convinced himself that Chomma will certainly forget.

.ãunn. v. open; **ge'drũcha nãunn** open this damn door!

ãunngyo n. key.

.aung. 1. v. walk. 2. v.adv. walk, manner marker for a path of motion verb, **Jjēdra sho zen hlaungiló** the Jjēdra walked up the tree.

.aunw. v. be eight; 8.

.aur. v. be official.

.aurr. v. be green.

.aury. v. wander (aimlessly).

.aus. v. lock; secure.

aussã n. lock.

.aush. v. be meek; be complacent.

.ausr. v. be fast; be quick.

.aut. v. trade, exchange; do business; **mriing zen dautellongó** I went out to buy candy; **yauta tunn iinyá** our business is doing great!

a. mauta n. sell-out, "rat."

b. zauta n. economy.

c. .usn.aut. v. "dump," sell for a pittance; **Pyom zen tusnautén o jjã'té** supposedly they're going to dump Pyom.

.ãut. v. be horny; **dadãuta zen obé** it makes me really horny.

.auw. v. be likely; be probable; **A: Tanya Radá zwĩ sōga zwē hlantau? B: Pan auwìré. Hlaryé yũ' desné** A: Could Radá be the spy? B: Likely not. I believe it's someone else.

.auy. 1. v. float, **Yanoppsã al yauyawa** we were floating around in the Polychronom. 2. v.adv. float, manner marker for path of motion verbs, **Yanoppsã ngo sed chĩ yauyamó** we floated through the walls of the Polychronom.

.ãuy. 1. v. be magic, be supernatural. 2. v. be inexplicable; **dro sshwu ãuyaja zen lyaudré** we need a miracle.

ãuyaja n. miracle.

.auz. 1. v. strive; **dòidauzo'wenyá** I will perseveringly strive. 2. v.gov. try; **dro sippra Ē zen hleshrauzwa** some management dude was trying to find you.

.aw. v. manufacture; work. **ge'ttyang dawa ttyiil irepé** my work for the day is still unfinished.

.ãw. v. precede; come before.

awa 1. n. work. 2. n. role.

.ay. 1. v. *increase; be more; become more; llyã'nayá another one!* (when you want more of the same thing). 2. v.adv. *-er*, used to form a comparative, with **rrinn** for the comparand; the verb may be used independently with a nominalized stative verb for the same sense, **ron tunngem epetrau, rang innngon iina ayirén** *if this reality completely changes, then that one won't be any better.*

a. **.ot.ay.V.** v.adv. *approximately, roughly; bo nerũ, Gyann donrõ'nu hlotayunén* *when are you expecting Gyann, roughly? otayaurra* *a more or less green color; the expression otáy* may be used independently, **otay iwaurraté** *it's kinda green-ish somehow.*

.ãy. v. *be interesting.*

.az. v. *be permanent; eternal; consistent.*

.azm. 1. v. *be white.* 2. v.adv. *light*, with other color words.

.azr. v. *wonder; ponder; with jan* for the thing wondered about, or with **zen** for very intense concentration, more in the *ponder* sense; **hlo jan dazré** *I wonder about him* (he might be good for this); **hlo zen dazré** *I really wonder about him* (either through obsession or suspicion, for example); with **yũ'** for a full clause, **gammu tunén? yũ dazré** *I wonder how many of them will come.*

.azz. v. *be precious; be valuable.*

.azzng. v. *be dangerous.*

B: Pan auwìré. Hlaryé yũ' desné** *A: Could Radá be the spy? B: Likely not. I believe it's someone else.*
zwennng n. transaction; deal.
zwĩ art. *the previously discussed*, reinforcing the definite nature of the discourse topic; **zwĩ riimm asha dde dwad'w'anté** *the colors (we were discussing) are red and brown*; **tantang nepettũ, nn zwĩ yauta onũ utrén** *even though you're completely opposed to it, the deal will go through.*
zwõ n. prize.
zwõj n. male upper arm.
zzad n. hero.
zzē n. division; group; unit (of people typically).
zzran n. fate; destiny.
zzur n. outer elbow.

B Names

Female first names: **Azé, Briil, Chyii, Etu, Giilya, Hlala, Jeya, Jjau, Kada, Kahla, Kaja, Kana, Kejja, Kelta, Kepa, Kerrda, Kili, Lassu, Llød, Lyã, Lyadii, Lyau, Nēna, Ølla, Øwel, Pøm, Pri-inng, Radá, Ralya, Sriinya, Tallii, Trenna, Wanya, Womé, Yattíí, Yerra, Yiizii, Yìyii.**

Male first names: **Aned, Azó, Bbed, Broì, Chomma, Ddiinng, Ddūd, Dwann, Etíímm, Eyád, Gìd, Gwarr, Gyann, Hlellod, Hlonng, Jobód, Joro, Krenn, Kyannng, Kyemm, Kyod, Ladda, Lann, Mēnng, Ngol, Ngudo, Nronn, Pasro, Praled, Renn, Resh, Sann, Senn, Srom, Syomm, Tõl, Tonro, Trann, Uba, Wimm, Wossa, Yopa, Yøtta, Yunn.**

Unisex first names: **Ånng, Iissy, Koyo, Noma, Pød, Yeng.**

Family names date back to the times of the original acquisition of Pyom by Royddin and were common terms for occupations and functional areas at that time. Some of these are still relevant terms in the language (**pwed, jjuj, õ**) and some are still close, such as **denn** *algorithm*, but most are purely names to residents of the Planet. The vast majority would not associate **Bbrìd** with robots for any reason. Acquired labor force members get **Nrawa** *Manufactory* as their family name.

- **Bbrìd** Robots
- **Chyønnng** Assembly
- **Ddar** Runner
- **Ddenn** Computers
- **Èj** Plumber
- **Hlwamm** Miller
- **Jjuj** Metal
- **Kyãunng** Mold Maker
- **Kyiiid** Repair
- **Llyamm** Technical/Systems
- **Mmẽj** Clerk
- **Nremm** Foreman
- **Õ** Engineer
- **Pwed** Vehicles
- **Rryãj** Driving
- **Shoì** Wood
- **Snaung** Mechanic
- **Snéd** Logistics
- **Srãud** Construction
- **Ssød** Human Resources
- **Ttad** Maintenance
- **Ttiinng** Saw/Cut
- **Ttred** Loader
- **Ttũ** Efficiency
- **Yurr** Security

In giving someone's first name, the order is *Family Name ngo First Name*, with **ngo** often written without the vowel: **Ddar ngo Resh, Mmẽj ng Kana**.

It's somewhat rare for people's last names to be used as a primary form of address. Using it typically indicates some kind of criminal reputation.

C Ditchling – ມຸ່ງໂຮງ

“Proper” Siinyamda *per se*, is a thing of the past in many senses. But, it was characterized by a crisp accent somewhat akin to a French person speaking Italian. In the area around Senn, there are some management elites who still speak the Pyomian dialect of Mizemm (Corporate Standard). Although there are many direct loans in Siinyamda from Mizemm, the languages are not in any way mutually intelligible. And, at the far end of Siinyamda (technically speaking, Padnamda) there is the broad dialect known “officially” to Senn as **Sumrira ngo Pamda** (The Speech of Unemployment), but everyone calls it **Pēbamda** (Ditch Talk) or simply **Pēba** (ditch, **.ēb.** dig a hole or trench). In English the name is “Ditchling,” after the inhabitants themselves. To a speaker of the workplace dialect, Pēbamda comes across similar to the gap between a French person speaking Italian and Brazilian Portuguese. It can be very difficult for them to understand each other. Here’s why:

Standard	Pēbū namdwinn. Ĕ’sh eppūnob-eddē.	Don’t speak Ditchling. It can get you in much trouble.
Pēba	Pēba namdirā. Efō gūna Ē’pre nireḏa.	Don’cha talk Ditchling. Ye can bring a heap o’ that trouble on’ya.

The dot under vowels marks a reduced vowel, with a raised pitch of the vowel in the following syllable.

Other noteworthy features of Ditchling —

Obligatory **g-** on inanimate derived nouns (from **ge’**, **go’**, **ga’**, deictic markers). St.: **ūna**, Ditch.: **gūna**, *trouble*. If literate speakers of Siinyamda had occasion to write down Ditchling, they might spell these with **g’**.

Derivation of plural animate nouns with **t-** and an absence of **s-**forms: St.: **sōcchā**, *ghost*, Ditch.: **h.iw.a/t.iw.a**, *ghost/ghosts* (< ***s.iw.a/sōn.iw.a**).

Sparing use of **.ant.** or its being replaced entirely by a fixed form **yā** that is only used when the speaker feels certain of facts.

Standard	Summū, gem sōcchā tantē.	They say this place is haunted.
Pēba	Ge tiwa yun tumma.	They gossip that (there are) ghosts here.
	Wāsh todjumman, nn ge tiwa yā.	They are just idly gossiping, but it’s definitely haunted here.

There are many basic differences in vocabulary, St. **jjiiir** *hand* vs. Ditch. **tō**, St. **bāu pobbra** “*zombie*,” someone brain-washed, vs. **hāshārya** “*he meekly wanders*.”

Word order is rather strictly (S) O S.V in Ditchling and the particle **zen** is extremely rare for transitive verbs. The other most common particle is **pre** (a mixed dative/benefactive). Where

Standard maintains a plethora of particles (cases) from Mizemmian origins, Ditchling often reverts to native roots in the same context.

Standard	Jjiir zen nejwìnn. Ggyo yìn nen- auzau.	Don't use your hand(s). Try doing it with a tool.
Pēba	Tō nejirḷā. Gyho ejū nenāzā.	.ej. use, .en. do, .auz. try
Standard	Nomja yel jjiir zen nòimrau.	Wash your hands before you eat.
Pēba	Nomja ʔwū tō nōmrḷā.	.omj. eat, .āw. precede, .òimr. wash

The standard language lacks a progressive tense and accomplishes it with **tunn** now, usually right before the verb. Ditchling has reanalyzed the **-an** ending (act of/process of X) as progressive.

Standard	Senn nrawa iid tunn hluwé.	Senn is returning to the manufactory (now).
Pēba	Senn nrḷawa ga huwan.	.uw. return, come/go back

Words derived via **-an** in standard Siinyamda can only be used properly as nouns, but not so in Ditchling. A speaker of standard would likely hear **Senn nrḷawa ga huwan** as *Senn, y'all's working (there?) [gibberish...]*." In Ditchling, **.uw.** expects both a subject and a location (in that order). If the location were missing then the meaning "headed back (to where he normally is)" would be the default deduction.

Factory workers, particularly males, also often attempt to emulate Ditchling in their cursing for an extra dose of testosterone. This has produced the male pseudo-pronoun **ló** (/lo:/) which is a variant of Ditchling **ṛlō** (St.: **roì** male; man). It is comfortably translated as "dude" or Spanish "güey." With the masculine diminutive **-da** added the vowel is often shortened to normal length producing **Loda**, in the atmosphere of "Bro." So, **Ló, pucchyá!**; **Lóda, púsh!** (< **p.ucchØ**); and even **G'adúsh, Loda** that reall cuffs, Bro (cf. "that SUX ASS, Bro") are common in speech among male friends. This also serves in the sense of "Busted!" with **Ø'znn tucchó** they've cuffed me. And **Nucché**n is common for "You're gonna KILL me!" when casually asking for forgiveness in advance of explaining a confession. If threatening another with physical violence, **Dìnnkucché**n, **Ló!** I'm about to fuck (you) up, Man!

D Conversational Routines

Nyey *hello!* (2 people meet)

Lyey *hello!* (3+ people meet)

Zo'nnoita? *How is everything?* Much less common and “old fashioned.” **Zo'nnoikya?**

Zo'nnaldé? Zo'nnaldwa? *How are you, how have you been getting along?*

Ta'nnodwé? Tan'lodwé? *Are you well (now)?*

Ta'nnubrodwa? Tan'lubrodwa? *Have you been well (since we last met?)*

N/Latodwé or N/Lodwaté. *You seem well.*

Danyé. *I thank. Thank you.* **Danyá!** *thanks very much!*

For *please* you have to decide who should be pleased by the theoretical result of the proposal.

Dulyau or Dulyũ, X. *I would be pleased if X, (please do something for me.)*

N/L/Hl/Tulyau or N/L/Hl/Tulyũ, X. *May it please you/him/her/them to/for X.*

Nulyau. **Ĕ'prã gem pomja** / (anté. / zen dassó / delló). (please, I'm offering something (up) to you (or your people).

Pinn zen zwě nebla'sh dadulyén. You could translate this as *please do me the honor of accepting it.* This would be for a *thing* that's there. If you had made a proposal like marrying someone, then:

Nulyau. **Nyě meyedwa zen dadopé. (Ron) (Geng'ya'sh) zwě neblén o yun/you'sh, (rang) depulyén.** *Please. I so want us to be married. (If) (This'thing/idea) you would accept, (then) I'll be over the moon.*

There would not be two things in the topical/focus so: **Geng'ya'sh zwě neblén o yun, depi-ijulyén.** *If and then* are not as obligatory as they are in English. More used for emphasis in theoretical scenarios.

Slang:

Q: **'Nnagwa? 'N(u)lagwa? (X'nu n/l.ag.wa?)** *Wha'ss up? (What... have you been smuggling?)*

A: **Īwetla, Lō.** *Not much, Man.*

Epakketla, Lōda. *Nothin' the fuck at all, bro.*

Wã'cchud / Wã'ppã, Bbyodda. *Same 'ol shit, Boss.*

Lō, nu'sh? / Lōda, nu'sh? *How 'bou'chu?*

The REALLY illicit or extreme answer to this is **yĩn'etla** *my ass is empty.* It implies even that I'm not eating enough to need to take a dump. “I ain't (even) got SHIT goin' on.”

Q: **Ló, yéd/pong/bbyod zōn'aldwa / zōn hlaldwa?** *Dude, how's it hanging?*

A: **Hleppuggwa, Lód', Dany'.** **Nnu'sh?** *He's been “up” a lot lately, Bro, Thanx. How 'bout you?*

A. **Dāudeddré. Hlan pítewé.** *Can't complain. He's gettin' his fare share of suckin' 'n' lickin'.*

Less vulgar:

Q: **Nyey, Lō, Cchil purnó?! Hey, Man, still not delisted?**

A: **Nyey, Lōda, Tã, cchil tōsrā. Ddē nosũ, Sadiij! Hey, Bro, Yeah, they still don't know (about whatever I'm likely doing to get be delisted). And you too! Congrats!**

Farewells (depends on context of the goodbye):

Nashtau. Lashtau. *Be safe.*

Nodwau. Lodwau. *Ne well.*

Nashtiibrau. Lashtiibrau. *Go/travel safely.*

Nashtøngau. Lashtøngau *“Go and come back safely”*

Nyìmney! Lyìmney!. *“See you” (again) soon.*

Llyã nyeya'j / lyeya'j *Until we're together next together, until I see you (we see each other) again.*

Dãd! *Bye! (said by the person who does not go.)*

Nãd! Lãd! *Bye! (said by the person leaving.)*

Slang (on goodbye):

Ølmé'rliré (< ølma erliré) or Ølmé'rliryá or Ditch Nō'ṛ!me'ṛ!hiṛ!a (< noi ølma erliré) *The obligations don't wait (patiently), Ditch: All (of the) obligations don't wait (patiently). “Gotta go. Lots to do.”*

Gãgã memyirã. *Widges don't assemble themselves.*

Ssi'nnén *Well, it will be soon, “Catch'ya later!”*

Nō'té'znn nucchã *Cuff'em all, “Don' let nobody mess wit'cha.”*

Names and introductions:

Zonnu nondré? Zo'nnondré? What's your name? Also just nondra'nu? in a very low register.

Ddūd dondré. Ddē (n)Ĕ nu'sh? (Ddē'Nē'nnu'sh?) My name is/I'm Ddūd. And what about you, what's yours?

Ø'sh Etíimm. Nyijoyé. *I'm Etíimm, Nice to meet you.*

Ĕ'sh zzē'nu anté? Nranu nersé? What's your group? Where do you bunk/live?

Ø'sh aunwuyonna (84a) pedwé. Abbasã deré. Dwu'sh (/Nr'ersa'sh) wezletoi llaung (or Nr'ezleta) y'anté. Cchu'ppēba. *I'm in Group 84 (more like “I belong to the 84th,” lit. “I'm owned by 84.”) I run a loader. (my) dorm is in section/area 103. (It's a) shit hole.*

Ĕ'sh dwuj nrappã w'osantũ, g'epohla. *What a surprise that your dorm is a toilet too.*

They don't talk about the weather much,

Ssa, ge'ttyang sennleddé. *Well, one can breathe today.*

Tan. (Tã., Tang.) Ny/Lyijeddé. *Yes. (Yeah., Yep.) We can be happy.*

Tan. (Tã., Tang.) Ny/Lyanyeddé. *Yes. (Yeah., Yep.) We can be grateful.*
